

**Pemberton, British Columbia  
Flight Information Services En Route (FISE)**

NAV CANADA, the country's provider of civil air navigation services, has evaluated the provision of Flight Information Service En Route (FISE) using Remote Communication Outlets (RCO). As a result of this evaluation NAV CANADA has embarked upon a multi-year RCO redesign program aimed at improving FISE service coverage and reducing frequency congestion on 126.7MHz.

To achieve these objectives and better serve aviation communication requirements in the Pemberton area, the following FISE RCO changes will be made:

- A new FISE RCO with frequency **122.375 MHz** will be installed at Pemberton. Pilots operating in the vicinity of Pemberton who require flight planning, weather or NOTAM information should contact the Kamloops FIC (call sign "Pacific Radio") on this new frequency.
- Frequency **126.7 MHz (bcst)** will also be established with this new RCO. This frequency will not be monitored by the Kamloops FIC nor will it be used to provide FISE. It will however be used by the FIC, as required, to provide the aeronautical broadcast service (broadcast of SIGMET and urgent PIREP) and to conduct communication searches for overdue aircraft.

**These changes will take effect August 27, 2009 at 0901 Coordinated Universal Time (UTC).** The appropriate aeronautical publications will be amended.
