

**Hope, British Columbia
Flight Information Services Enroute (FISE)**

NAV CANADA, the country's provider of civil air navigation services, has evaluated the provision of Flight Information Service Enroute (FISE) using Remote Communication Outlets (RCO). As a result of this evaluation NAV CANADA has embarked upon a multi-year RCO redesign program aimed at improving FISE service coverage and reducing frequency congestion on 126.7MHz.

To achieve these objectives and better serve aviation communication requirements in the Hope area, the following FISE RCO changes will be made:

- The Hope FISE RCO frequency will change from 126.7MHz to **125.85MHz**. Pilots who require flight planning, weather or NOTAM information should contact the Kamloops FIC (call sign "Pacific Radio") on this new frequency.
- The existing 126.7MHz will no longer be used for FISE or monitored by the Kamloops FIC. It will however be used by the FIC, as required, to provide the aeronautical broadcast service (broadcast of SIGMET and urgent PIREP) and to conduct communication searches for overdue aircraft.

These changes will take effect July 29, 2010 at 0901 Coordinated Universal Time (UTC).
The appropriate aeronautical publications will be amended.

The FISE RCO system is under revision with numerous changes occurring over the next several years. Pilots should monitor NOTICES and aeronautical publications for specific RCO changes. Information on the RCO Redesign project including current maps of RCO sites and their frequencies is available on the NAV CANADA web site (www.navcanada.ca) under **Products and Services / ANS Programs / RCO Redesign** or directly at the following [link](#).
