

**Flin Flon, Manitoba
Flight Information Services En Route (FISE)**

NAV CANADA, the country's provider of civil air navigation services, has evaluated the provision of Flight Information Service En Route (FISE) using Remote Communication Outlets (RCO). As a result of this evaluation NAV CANADA has embarked upon a multi-year RCO redesign program aimed at improving FISE service coverage and reducing frequency congestion on 126.7 MHz.

To achieve these objectives and better serve aviation communication requirements in the Flin Flon area, the following FISE RCO change will be made:

- Frequency 126.7 MHz will be installed. This frequency will not be used for FISE or monitored by the Winnipeg FIC. It will however be used by the FIC, as required, to provide the aeronautical broadcast service (broadcast of SIGMET and urgent PIREP) and to conduct communication searches for overdue aircraft. It will be published as "**126.7 (bcst)**". Pilots will continue to use the **123.27(5)** MHz RCO for FISE.

This change will take effect **July 29, 2010 at 0901 Coordinated Universal Time (UTC)**. The appropriate aeronautical publications will be amended.

The FISE RCO system is under revision with numerous changes occurring over the next several years. Pilots should monitor NOTICES and aeronautical publications for specific RCO changes. Information on the RCO Redesign project including current maps of RCO sites and their frequencies is available on the NAV CANADA web site (navcanada.ca) under **Products and Services / ANS Programs / RCO Redesign** or directly at the following [link](#).
