

## **Vancouver International Airport Notification of ILS Replacement**

NAV CANADA wishes to inform its customers that the Instrument Landing System (ILS) for runway 08R at the Vancouver International Airport (CYVR) will be replaced during the summer of 2010 as part of the National ILS Replacement Program. The installation of a new PARK AIR ILS system on runway 08R at Vancouver International Airport will address life cycle (reliability and integrity of service) and operational efficiency issues.

Additionally as requested by the Vancouver Airport Authority the ILS Glide Path (GP) for runway 26L will be relocated.

The planned outage periods are as follow:

- 08R ILS from **05 July at 09:00 to 10 August, 2010 at 16:00 local time**
- 26L GP from **11 August at 09:00 to 27 August, 2010 at 16:00 local time**

Dates are subject to change depending upon weather conditions, contractor availability and Vancouver Airport Authority runway closure periods. Actual dates of scheduled outages will be published via NOTAMs. Pilots should carefully monitor the NOTAMs before and during the construction period for specific dates of the outages or other related disruptions.

NAV CANADA regrets any inconvenience to its customers; however, the importances of these navigation aids are recognised and every effort will be made to restore ILS Runway 08R and Glide Path Runway 26L operations at Vancouver International Airport as quickly as possible.
