

AERONAUTICAL INFORMATION CIRCULAR 16/18

CHANGE IN AVIATION OBSERVING WEATHER PROGRAM CARTWRIGHT, NEWFOUNDLAND AND LABRADOR

NAV CANADA, the country's provider of civil air navigation services, conducted an aeronautical study that reviewed the aviation weather observation requirements at the Cartwright, Newfoundland and Labrador (NL) airport.

The study recommended replacing the contract weather office (CWO) with an Automated Weather Observation System (AWOS) to provide 24-hour weather observations. The AWOS installation will include a Voice Generator Sub-System (VGSS) and weather cameras.

AWOS information will be broadcast via the VGSS on a very high frequency (VHF). Weather camera images of the airport and surrounding area will be viewable on the NAV CANADA Aviation Weather Website. The 24-hour aerodrome forecast (TAF) remains.

This change will take effect 13 September 2018 at 0901 Coordinated Universal Time (UTC). The appropriate aeronautical publications will be amended.
