

AERONAUTICAL INFORMATION CIRCULAR 24/18

CHANGE IN AVIATION OBSERVING WEATHER PROGRAM WINDSOR, ONTARIO

NAV CANADA, the country's provider of civil air navigation services, conducted an aeronautical study that reviewed the aviation weather observation requirements at the Windsor, Ontario airport.

The study recommended replacing the contract weather office (CWO) with an Automated Weather Observation System (AWOS) to provide 24-hour weather observations. The AWOS installation will include a Voice Generator Sub-System (VGSS) and weather cameras.

AWOS information will be broadcast via the VGSS on a very high frequency (VHF) and weather camera images of the airport and surrounding area will be viewable on the NAV CANADA Aviation Weather Web Site (AWWS). The 24-hour aerodrome forecast (TAF) remains.

This change will take effect 08 November 2018, at 0901Z Coordinated Universal Time (UTC). The appropriate aeronautical publications will be amended.
