

NOTICE OF CHANGE

AVIATION WEATHER SERVICE CHIBOUGAMAU/CHAPAIS, QUEBEC

NAV CANADA, the country's provider of civil air navigation services, conducted an aeronautical study that reviewed the requirements for the aviation weather service provided at the Chibougamau-Chapais airport.

The study recommended that we replace the Contract Weather Office (CWO) with an Automated Weather Observation System (AWOS). The AWOS installation will include a Voice Generator Sub-System (VGSS) and weather cameras.

AWOS information will be broadcast via the VGSS on a VHF frequency - 126.25 (English), 128.75 (French) - and weather camera images of the airport and surrounding area will be viewable on the NAV CANADA Aviation Weather Website. This change will maintain the 24-hour per day aviation weather observing program (METAR/SPECI) and the 12-hour aerodrome forecast (TAF).

This change will take effect **10 November 2016** at 0901 Coordinated Universal Time (UTC). The appropriate aeronautical publications will be amended.
