Aeronautical Study Plan

Review of Aviation Weather Requirements

Red Lake, ON

Scope of Study
The aeronautical study will determine if an Automated Weather Observation System (AWOS) will be an acceptable means of providing aviation weather observations to meet operational requirements at the Red Lake (CYRL) airport. Additionally, the study will confirm if the current 16-hr Aerodrome Forecast (TAF) is sufficient to meet the needs of NAV CANADA customers flying in northern Ontario.

NAV CANADA will consult with customers and stakeholders on this aeronautical study during the Spring of 2019.
