REVOKE INSTRUMENT APPROACH PROCEDURES PRIOR TO NAVAID DECOMMISSION: NATIONAL

NAV CANADA, the country's provider of civil air navigation services, conducted an aeronautical study that reviewed the requirement for non-directional beacons (NDBs) and very-high frequency omnidirectional rangefinders (VORs).

The study concluded that given the comprehensive radar surveillance coverage, and the capabilities of area navigation (RNAV) with global navigation satellite system (GNSS) equipped aircraft, many navigation aids (NAVAIDS) are no longer required and should be decommissioned. The following instrument approach procedures were assessed, and it was determined that they can be revoked prior to the associated NAVAID decommission without reducing airport access.
