

# AERONAUTICAL INFORMATION CIRCULAR 21/20

## VICTORIAVILLE (QUEBEC) AERODROME MIGRATORY BIRD ACTIVITY SEPTEMBER 15 – NOVEMBER 30, 2020

The Beaudet Reservoir, located approximately 3NM to the South-West of the Victoriaville aerodrome and just South of the extended runway centerline, attracts a large number of Canada Geese and White Geese (Snow Geese) during the migratory season which is approximately from mid-September to the end of November.

Aircraft flying in proximity to the Beaudet Reservoir, at low altitude, may cause a large number of geese to fly off and create a hazard to their own aircraft as well as to others in the area.

To ensure aviation safety in the area, we highly recommend that all pilots avoid flying in proximity to the Beaudet Reservoir below 2000 AGL, and fly no lower than the altitude required for take-off or landing at the aerodrome.
