CANADIAN AIRPORT CHARTS
CARTES DES AÉROPORTS CANADIENS

The information in the Canadian Airport Charts provides pictorial displays of Canadian airport manoeuvring areas found in the Canada Air Pilot or the military GPH 200, and may be reproduced for the sole purpose of assisting pilots during aircraft ground movement operations. Up-to-date information on flight planning procedures and airport services, including fuel, lighting, and local prohibitions or procedures is found in the Canada Flight Supplement.

L'information qui se trouve dans les Cartes des aéroports canadiens contient des indicateurs topographiques des aires de manœuvre des aéroports canadiens provenant du Canada Air Pilot ou du GPH 200 militaire et peut être reproduite à seule fin d'aider les pilotes durant les mouvements d'aéronefs au sol. De l'information à jour sur les procédures de préparation de plans de vol et les services d'aéroport, y compris le carburant, le balisage, ainsi que les interdictions et les procédures locales, se trouve dans le Supplément de vol Canada.

Preface

NAV CANADA, as the office responsible for the publication and distribution of aeronautical information, has decided to make aerodrome diagrams readily available to general aviation pilots through its website. This move will contribute to enhance aviation safety and will help to mitigate some of the risks associated with runway incursions.

Hot Spot: A location on an aerodrome movement area with a high risk of collision or runway incursion, and where heightened attention by pilots/drivers is necessary.

Hot Spots are found on applicable Canadian Aerodrome Charts.

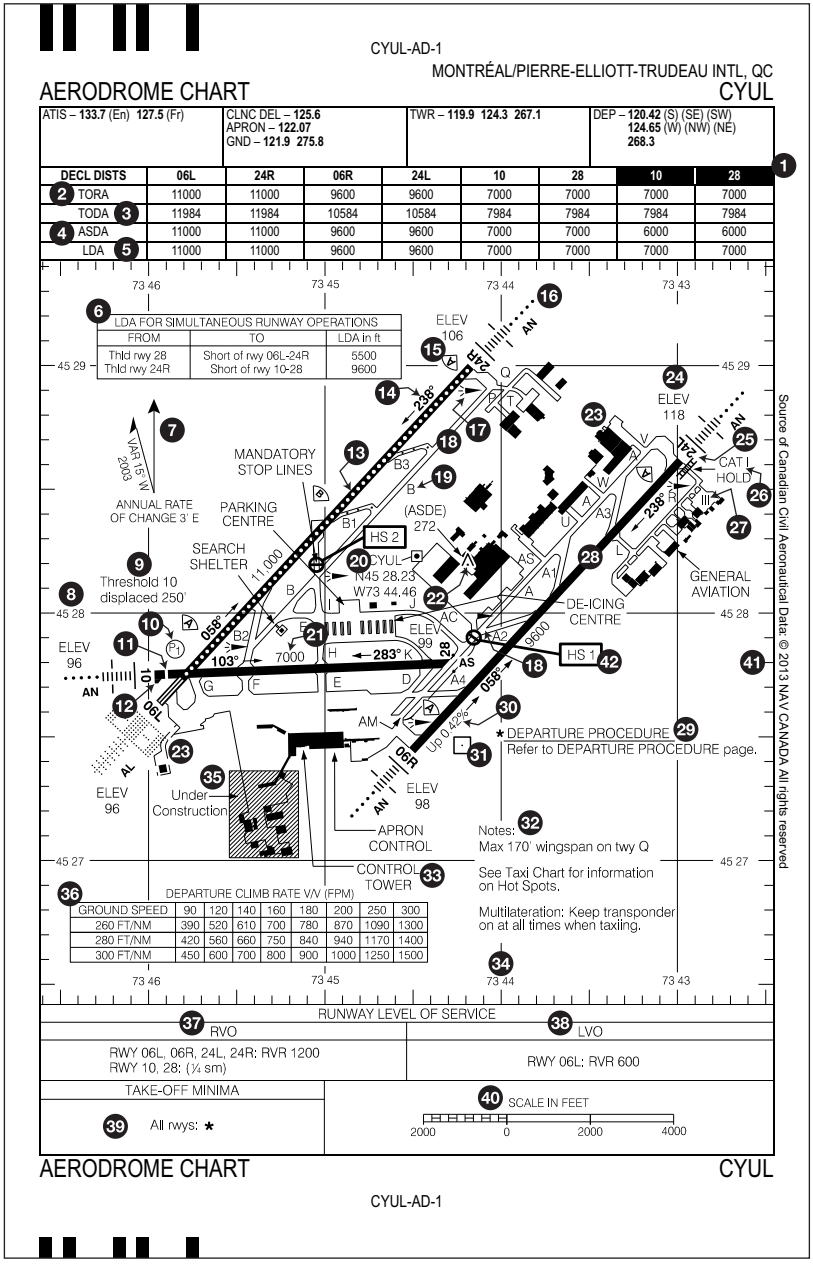

Préface

NAV CANADA, en tant que responsable de la publication et de la distribution de l'information aéronautique, a décidé de mettre les schémas d'aérodrome à la disponibilité des pilotes d'aviation générale par l'intermédiaire de son site Web. Cette décision contribuera à accroître la sécurité aérienne et aidera à atténuer certains des risques associés aux incursions sur piste.

Point chaud : Endroit sur l'aire de mouvement d'un aérodrome où il y a un risque accru de collision ou d'incursion sur piste et où une attention soutenue de la part du pilote/conducteur est requise.

Les points chauds se trouvent sur les cartes d'aérodrome canadiennes applicables.

All graphics presented here are for explanatory purposes only and are not intended to be used for navigation.

HOT SPOTS

HS 1- Rwy 19 & 25 intersection can be confusing.

HS 1- Do not exit onto Rwy 01/19 or Twy "H" when landing Rwy 07 w/o prior ATC auth.

NOTES:

1 - No aircraft/vehicle control on aprons. Maneuvering at pilot's discretion.

2 - Run up to be completed prior to contacting gnd on 121.9 when possible. Advise gnd run up complete.

3 - DEP/ARR AC provide TYPE/IDENT/POSITION/INTENTIONS on initial call.

4 - Caution on Apron 1 & 2 due frequent heli ARR/DEP.

5 - Airport restricted to a maximum weight of 12,500 lbs except with airport operator's authorization.

Widebody Aircraft

A380*/B747-8/AN124 AVAILABLE TAXIWAYS: D, DT, D3, D5, D7, D9, H (north of rwy 08R/26L), J (north of parking position W2), JA, K (west of R), L (west of 13/31), M, M5, M6, M7, M9, M10, P, R & V.
*A380: When A380 is on Twy M between Twy J and Twy T, the Taxilane between Gate 66 & Twy T is restricted to B757 & smaller (& vice versa). Discretionary oversteer is required at every intersection.

A340-600/B777-300/A350-900/A350-1000/B787-10 AVAILABLE TAXIWAYS: D, D3, D5, D7, D9, DT, DY, E (south of rwy 08R/26L), H (north of rwy 08R/26L), J, JA, JB, JC, K, L (West of J), M, M4, M5, M6, M7, M8, M9, M10, P, T, R & V. Discretionary oversteer is required at every intersection.

Rwy 08L Arrivals
Use of reverse thrust is to be avoided or reduced when conditions permit.

Rwy 08R Arrivals
Acft exiting onto D1, turn north on E. Do not stop in rwy area. See HOT SPOT 2.

Rwy 13 Departures
Not authorized for A340-600/B777-300/A350-900/A350-1000/B787-10 & larger.

Rwy 26R Arrivals
Use of reverse thrust is to be avoided or reduced when conditions permit.

Rwy 26L Arrivals
Turns onto Rwy 31 NOT AUTHORIZED without clearance. Acft exiting onto Rwy 13/31: RH turns onto D rstd to B767/A310 & smaller, discretionary oversteer is required. Acft exiting onto H, hold short of D. Do not stop in rwy area. See HOT SPOT 2.

Rwy 31 Arrivals
Not authorized for A340-600/B777-300/A350-900/A350-1000/B787-10 & larger.

Taxiways

A (east of E): Rstd to B767/A310 & smaller.

A2: Rstd to Lear 60/DH8-300 & smaller.

B: Rstd to B767/A310 & smaller.

C (south of F): Rstd to B737/A321 & smaller.

C (north of F): Rstd to B767/A310 & smaller.

D: CAUTION: Acft cannot safely taxi via Twy D East or West past acft at the Twy D5 or Twy D7 hold lines.

D (eastbound): No left turns onto H by A321/B737-900 & larger.

D (westbound): No left turns onto H. Right hand turns onto Twy DR - discretionary oversteer required.

D2: Rstd to CRJ-900 & smaller.

D7: No RH turns onto D.

DR, DS: Rstd to B767/A310 & smaller.

Source of Canadian Civil Aeronautical Data: © 2023 NAV CANADA All rights reserved

Notes

DW: Rstd to B757 & smaller.

E (north of D): Rstd to A330/B787-10 & smaller.

F (west of C): Rstd to B767/A310 & smaller.

F (east of C): Rstd to CRJ-900 & smaller.

G: Rstd to A310/B767 & smaller.

H (southbound): No right turns onto A, L, or H4, no right turns onto D by B737-900/A321 & larger. No left turns onto D1.

H (northbound): No left turns onto V. No right turns onto D. No right turns onto L for B767/A310 & larger.

H (south of rwy 08R/26L): Rstd to B767/A310 & smaller.

H2: Avbl to B767, A310 & smaller.

J (southbound): B747/A340 not auth S of Twy K. All acft use min thrust when turning due jet blast.

J (northbound): No left turns onto K by B767/A310 & larger.

L: Entry & exit at Apron VI rstd to B737/A321 & smaller. No right turns onto V.

M1-M6 (rapid exit): Design speed in wet conditions is 50 kt (95 km/h).

M3: Not avbl to A340-600/B777-300/A350-900/A350-1000/B787-10 & larger.

M4: No left or right turns onto M for A340-600/B777-300/A350-900/A350-1000/B787-10 & larger.

P: Right turn onto M rstd to B767/A310 & smaller.

S: Rstd to B767/A310 & smaller.

V: No left turns onto L.

Uncontrolled Taxiways

C (south of F), F, J (btwn K & L), Q, DR, DS, DT, DU, DV & DW.

Uncontrolled Vehicle Crossings

DS, DT, DU, DV, DY, F, H (north of H4), J, JA, JB, JC, K, N7, P, Q, R, S, T, V.

APU Shutdown Procedure

Acft Auxiliary Power Unit (APU) use shall be limited to 15 min or less in total between on-block time and departure of acft from stands supplied with Ground Power Unit (GPU) and/or preconditioned air, for environmental reasons, if the outside air temperature is between 0 degrees and 20 degrees Celsius.

Acft shall not need to comply with the above limitations on stands not equipped with serviceable GPU and/or preconditioned air or if there are overriding health & safety considerations.

Source of Canadian Civil Aeronautical Data: © 2023 NAV CANADA All rights reserved

Notes

Apron

Advise ATC if ground crew not present at gate.

Apron I: Rstd to CRJ-900/SF34 and smaller.

Apron III: Jets tow in & out.

Apron IV: Rstd to B757 & smaller. Acft stand taxilane east of DW rstd to Convair CV-580 & smaller.

Apron I, II, III, IV, V, VI, VIII: PPR Airport Ops is required.

Apron VI (East) bypass restricted to B737 and smaller.

Apron VI (East) bypass (taxilane centerline amber lighting): Simultaneous use of dual taxilanes restricted to narrow body acft.

Apron VI (East) Pushbacks from remote parking positions E1-E3 to west taxilane.

Apron VI (East) Pushbacks from remote parking positions E10-E19 to south taxilane.

Apron VI (horseshoe): Taxilanes restricted to B737/A321 & smaller.

Apron VI: Travelling eastbound, turns onto P restricted to B767/A310 & smaller.

Apron VIII: Rstd to B767/A310 & smaller.

PPR for all engine airstarts or crossbleed starts on aprons I, II, III, IV, V, VI, VIII.

Hot Spots

HS 1 - Twy V holdline for Rwy 13-31 is 30 m (100 ft) back due to intersection geometry.

HS 2 - Acft taxiing H, southbound, holdline is located 30 m (100 ft) back from the standard rwy hold position. Acft exiting onto D1, turn north on E. Do not stop in rwy area.

HS 3 - Twy N7 holdline for Rwy 26R 08L at intersection Twy N7 and Apron IX. 214 m from rwy edge.

HS 4 - Acft cannot safely taxi via Twy D East or West past acft at the Twy D5 or D7 hold lines. Twy D9 commences beyond the runway holdshort line for Rwy 08R/26L on Twy D and Twy DY.

HS 5 - Multiple taxilanes converge.

HS 6 - Taxiing to Rwy 08R/26L, acft fail to hold short and incur on Rwy 13/31 on Twy A.

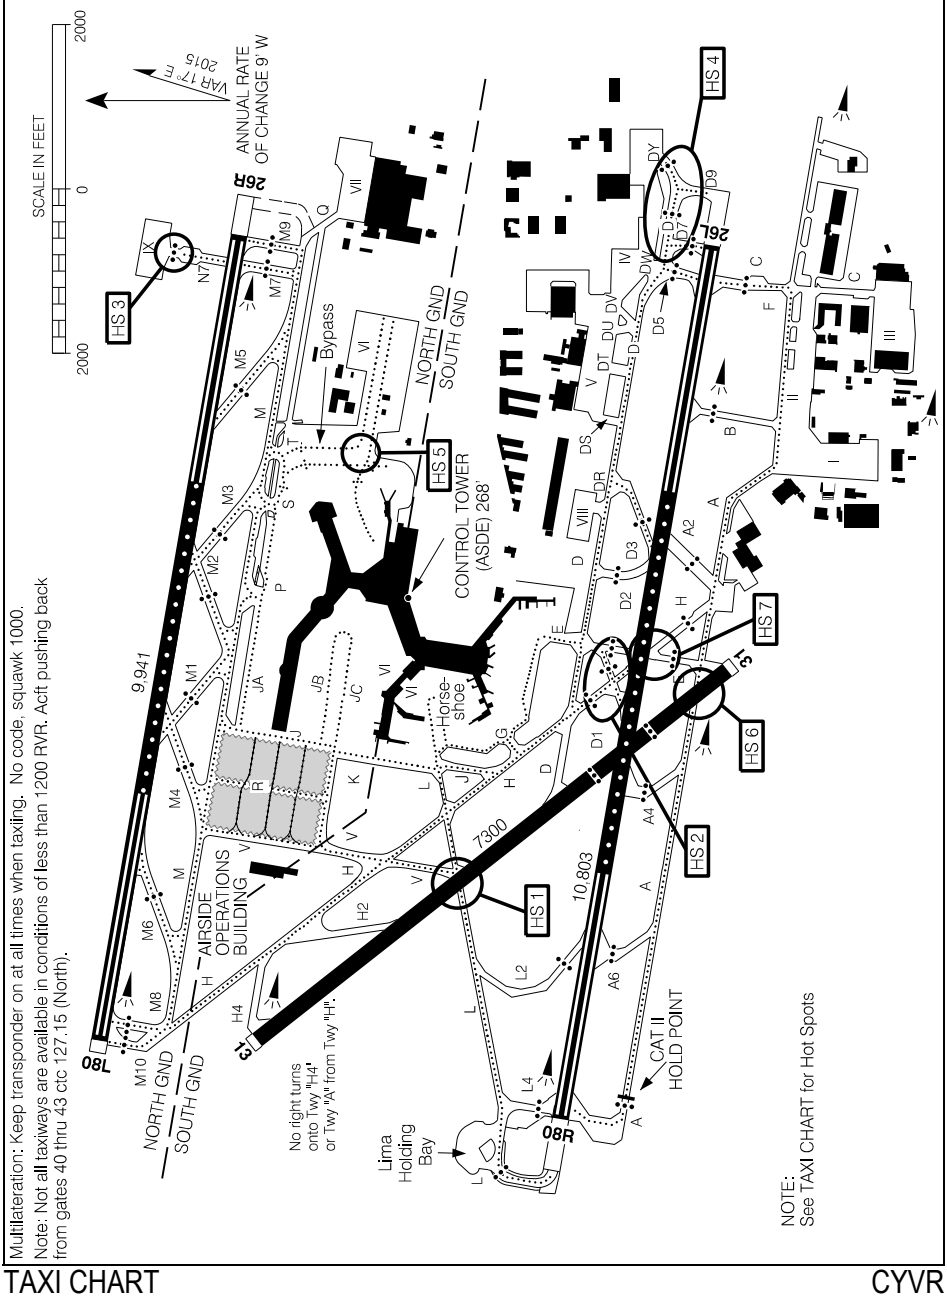

HS 7 - Taxiing across Rwy 08R/26L, acft fail to hold short and incur on Rwy 13/31 on Twy E.

Low Visibility Procedures (RVR less than 1200 to 600 ft)

Application

These procedures apply to ground movements of aircraft arriving and departing under low visibility conditions. Arrivals and departures below RVR 600 are not authorized. When weather conditions indicate visibility below RVR 1200 is imminent, procedures will be implemented restricting aircraft and vehicle operations on the movement area. The following message will be added to the ATIS broadcast: “Low visibility procedures in effect for <name of applicable runway>”.

General

Taxi Routes

Low Visibility Taxi Routes are equipped with green inset centerline lighting. Some taxiway/taxiway intersections have been identified with three inset yellow centerline lights. Midfield crossings of 08R/26L are not permitted during low visibility operations.

Airport Surface Detection Equipment (ASDE)

Ground radar is used to monitor the position of aircraft operating on the manoeuvring area. In the event of an ASDE failure, ATC may suspend, restrict or terminate low visibility operations.

Departures

The primary runways for departure are 08R/26L. Yellow flashing runway guard lights (wig-wags) and stop bars are installed abeam each hold line. Intersection take-offs are not permitted.

Sequencing of Aircraft Ground Movements for Take-off

Do not request start, push back or call for taxi clearance until the reported RVR is greater than:

Aircraft/Pilot Take-off Minima	Minimum RVR for Start
1200 RVR	1000 RVR
600 RVR	600 RVR

SMGCS Rwy 08L/26R and 08R/26L

Runway/taxiway intersections are equipped with yellow flashing runway guard lights and stop bars consisting of red in-set lights and red elevated lights located at the taxi hold position.

At runway entry points, M10, M8, M7, M9, N7, L, D, D5, D7, DY, C and A, when the red stop bar lights are illuminated, green lead-on lights beyond the stop bar are extinguished. When ATC issues a clearance to proceed onto the runway, the red stop bar lights will be extinguished and the green lead-on lights beyond the stop bar will be illuminated. The stop bar is reset automatically as the aircraft moves onto the runway.

“AT NO TIME SHALL A PILOT CROSS AN ILLUMINATED RED STOP BAR”

Arrivals

The primary runways for arrival are 08L/26R.

Plan to exit on the centerline lighted rapid exit taxiways and proceed beyond the alternating green and yellow centerline lights to the taxi intersection lights to ensure the aircraft is clear of the runway and the ILS sensitive area.

1. De-icing at gates permitted for frost removal only, contact “VANCOUVER DE-ICE” on 129.95.
2. De-icing pads West are positively controlled when de-icing OPS are in effect, PAD CONTROL is providing control of all aircraft and vehicle movements on these surfaces.
3. 30 min prior to pushback or taxi, advise “VANCOUVER DE-ICE” on 129.95 that de-icing is required, the type(s) of fluids required and the aircraft type. VANCOUVER DE-ICE will designate de-ice pad.
4. When requesting pushback or taxi clearance, advise ATC that de-icing is required and designated de-ice pad.
5. When advised by ATC, contact “PAD CONTROL” on 131.975 for instructions in the de-icing center and assignment to a de-icing bay.
6. Follow PAD CONTROL instructions to de-icing bay.
7. When advised by PAD CONTROL, contact ICEMAN on 130.7 and confirm brakes set, aircraft configured, engines at idle, de icing fluid requirements and any special de-icing instructions.
8. After de-icing is completed and the aircraft has been inspected, ICEMAN will confirm aircraft is clean, start time for HOLDOVER and types of fluids applied.
9. When advised by ICEMAN, contact PAD CONTROL on 131.975 for instructions.

UNDER NO CIRCUMSTANCES MAY THE AIRCRAFT BE MOVED BEFORE PAD CONTROL ADVISES THAT THE AIRCRAFT IS CLEARED TO TAXI OUT OF THE BAY.

West Pad

1. Aircraft queuing is on Twy V at Twy K and on Twy M.
2. Narrow-body aircraft will use positions W1, W3, W4, W6, W7, W9, W17 and W19, indicated by yellow inset guidance lights.
3. When transferred from ATC, follow PAD CONTROL instructions to de-icing bays.

Ground Run-up Enclosure (GRE)

Operators must receive an orientation for the GRE facility prior to use.

Crews may contact the Icehouse to schedule de-icing up to 120 minutes prior to departure. Information required: aircraft type, flight number/call sign, and the type(s) of fluids required. Parking position 2A, on Apron 1, is the only staging position for the facility. Aircraft waiting to use the GRE must remain on their aprons until 2A becomes available.

Propeller aircraft, and jet aircraft with a wing span of 71 ft or less (Dassault Falcon 900 and smaller) may power in/out of the facility.

ICEMAN will advise if engines should be running during de-icing.

Entry Procedure

1. Before contacting ATC for taxi, contact ICEMAN 130.92 for position in de-icing queue.
2. When ICEMAN approves access to either the staging position (2A) or GRE, contact ATC 121.7 for taxi.
3. Proceed as instructed by ICEMAN. CAUTION: DO NOT enter GRE until instructed by ICEMAN.
4. Advise ICEMAN 130.92 when stopped in the GRE.

De-Icing Procedure

5. Contact ICEMAN 130.92 to confirm brakes set, aircraft configured, engines idle, and provide fluid requirements.
6. After de-icing is complete and the aircraft has been inspected, ICEMAN will confirm aircraft is clean, start time for HOLDOVER and types of fluids applied.

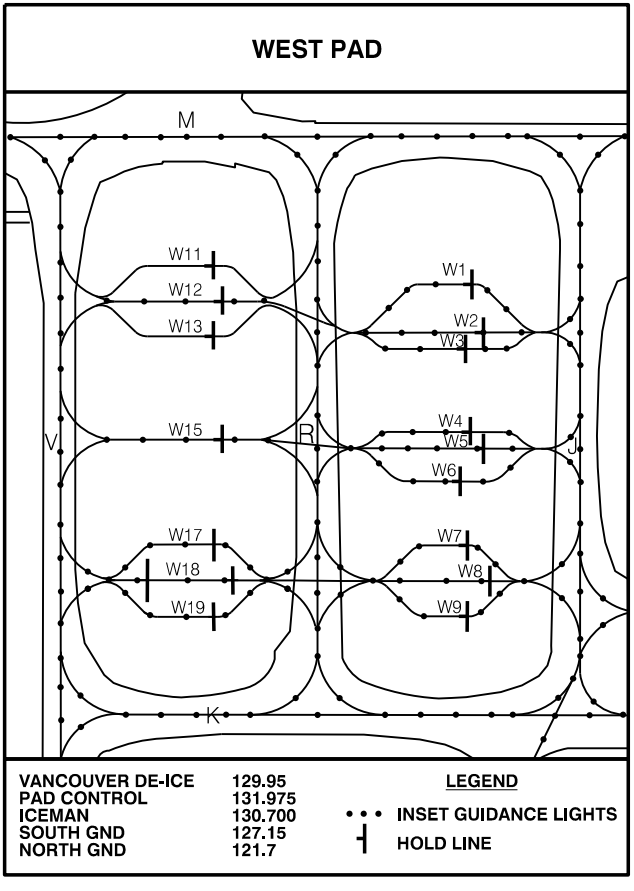

Exit Procedure

7. When ready to taxi contact ICEMAN 130.92 for instructions.

TAXI CHART CYYJ

EFF 20 APR 23

DE-ICING PROCEDURES

GENERAL

1. De-icing at gates is not permitted without authorization from airport operator.
2. North de-icing pad access is controlled by DE-ICE CONTROL. ALL Aircraft must have an approved assignment time prior to pushback or taxi.
3. Assignment times will be provided to de-icing providers only and are provided at 20-minute intervals. De-icing provider contact information and times are detailed in the Services section.
4. ATC does not have oversight of de-icing assignments; all inquires must be directed to de-icing providers or Snow Desk when open (250-953-7595). If the Snow Desk is not open, all inquiries should be directed to de-icing providers or Airport Operations, Manager, Integrated Operations Centre.

SCHEDULED COMMERCIAL AIRCRAFT

1. De-icing assignments will be communicated to commercial aircraft via de-icing providers and individual company processes.
2. **NO de-icing will occur until an assignment has been issued**.

NON-SCHEDULED AIRCRAFT

1. Aircraft requiring an assignment shall contact a de-icing provider, who will request the assignment.
2. De-ice control will issue the assignment between scheduled commercial movements and notify the de-icing provider. The de-icing provider will provide the assignment to the aircraft.
3. If the non-scheduled aircraft misses their assignment, a new assignment must be obtained.
4. **NO de-icing will occur until an assignment has been issued**.

EFF 7 OCT 21

Visibility Procedures (RVR less than 2600 to 1200 ft)

Reduced Visibility Taxi Routes

Taxi routes will be coordinated by ATC. All taxiways and runways are available except for rwy 08/26, taxiway D north of taxiway C, and taxiway C east of taxiway E. Uncontrolled taxiways may be used at the discretion of the pilot. Vehicles responding to an emergency are not required to follow the routes.

Departures

Rwy 17/35 will be used for departures.

Sequencing of Ground Movements for Take-off

Pilots must follow instructions on Sequencing of Ground Movements for Take-off as described in CAP GEN Operating Minima.

Surface Movement Guidance Control System

All taxiway intersections are equipped with rwy guard lights.

AT NO TIME SHALL A PILOT CROSS AN ILLUMINATED RED STOP BAR.

Arrivals

Taxi routes will be coordinated by ATC.

Airport Services and Equipment Available under Reduced Visibility Operations

All taxiway intersections are equipped with rwy guard lights.

TAXI CHART

CYYC

EFF 29 DEC 22

Low Visibility Procedures (RVR less than 1200 to 600 ft) and Reduced Visibility Procedures (RVR less than 2600 to 1200 ft)

Low/Reduced Visibility Taxi Routes

Anticipated taxi routes will be identified, and should portions thereof be unavailable, alternate routes will be identified.

In the event that an aircraft must taxi across the airfield for departure, the RVR values along the taxi route must be used to determine visibility limitations.

Once an aircraft has commenced taxi for takeoff, or taxi after landing, and the visibility falls below the published level of service on the given taxiway, the aircraft may continue to taxi.

Rwy 08/26 may be used as a taxiway.

Aircraft requiring imminent departure are permitted to tow during RVO but must obtain taxi routing clearances and follow all applicable airside traffic directives guidelines. Tow operations below 1200 RVR are not authorized on manoeuvring areas.

Engine run ups will not be allowed.

Departures

Departures during LVO will be on rwy 17L/35R. During RVO, rwy 17R/35L will be the preferential runway. The departure runway will be identified.

Runways 17L/35R, 17R/35L and 11/29 are equipped with high intensity edge lights and threshold/end lights. Rwy 17L/35R is equipped with centreline lights.

Departure taxi routes will be the most direct route to the threshold. Intersection departures are not permitted. If the primary route is unavailable, Calgary Tower may recommend a secondary route.

Exceptions for departures:

- Taxi to Rwy 11 may be approved from Apron VII and IX when RVR 11 is 1200 or greater
- Taxi to Rwy 11 may be approved from Apron I, East Deice and West Deice when RVR 11 AND 17R are 1200 or greater
- Taxi to Rwy 17R may be approved from Apron I, IX, East Deice and West Deice when RVR 17R is 1200 or greater
- Taxi to Rwy 17R may be approved from Apron VII when RVR 11 AND 17R are 1200 or greater.
- Taxi to Rwy 35L may be approved from Aprons III, IV, V, VI and VIII when RVR 35L is 1200 or greater
- Taxi to Rwy 29 may be approved from Apron I & II and IX when RVR 17R and RVR 29 are 1200 or greater.

Source of Canadian Civil Aeronautical Data: © 2023 NAV CANADA All rights reserved

Sequencing of Ground Movements for Take-off

Pilots must follow instructions on Sequencing of Ground Movements for Take-off as described in CAP GEN Operating Minima.

Surface Movement Ground Control System

All taxi hold positions on taxiways leading to Runway 17L/35R are equipped with stop bars.

Prior to manoeuvring on aprons, aircraft are recommended to contact Apron Advisory Service.

AT NO TIME SHALL A PILOT CROSS AN ILLUMINATED RED STOP BAR

Arrivals

Arrivals during LVO will be on rwy 17L/35R. During RVO, rwy 17L/35R will be the preferential runway. ATC will designate the arrival runway.

Calgary Tower will direct arrival taxi routes in order to ensure the aircraft exits the runway at the first available exit, and will provide instruction from the runway to the Apron.

Airport Services And Equipment Available Under Low Or Reduced Visibility Operations

Airport Surface Detection Equipment (ASDE)

Upon request “follow-me” service can be provided to aircraft. Requests should be made with as much notice as possible.

De-icing Procedures

1. Contact CALGARY DE-ICE on 129.5 thirty (30) min prior to push-back with aircraft type and estimated push-back time.
2. Contact CALGARY DE-ICE on 129.5 five (5) min prior to push-back to confirm treatment type and DE-ICE pad assignment.
3. Follow normal pushback procedures and advise Apron Advisory EAST or WEST DE-ICE pad has been assigned.
4. East Pad - Enter from Twy J at Twy JQ. When instructed by GROUND CONTROL, contact PAD CONTROL on 129.12 prior to entering pad.
5. West Pad - Enter from Twy J at Twy JV. When instructed by GROUND CONTROL, contact PAD CONTROL on 122.35 prior to entering pad.
6. Follow PAD CONTROL instructions, signboards and guidance lines to the assigned staging position or de-icing bay and confirm "BRAKES SET" when in position with nosewheel on stopbar.
   CAUTION: The wingtip to tail clearance for aircraft taxiing in the EAST pad from JQ behind staged aircraft is only assured when the staged aircraft nosewheel is on the stopbar.
7. If assigned a staging bay, monitor PAD CONTROL until further instructed.
8. When directed by PAD CONTROL, contact ICEMAN (East 123.35, West 122.72) and confirm "BRAKES SET, AIRCRAFT CONFIGURED FOR DE-ICE."
9. When de-ice is complete, do not move aircraft. When directed by ICEMAN, contact PAD CONTROL on assigned frequency.
10. Advise PAD CONTROL when ready to taxi. PAD CONTROL will assign appropriate GROUND CONTROL frequency to obtain taxi clearance.
11. Queuing is not permitted on Twy J, staging positions are provided on both EAST and WEST pads, reference DE-ICE Facility diagram.

CAUTION:

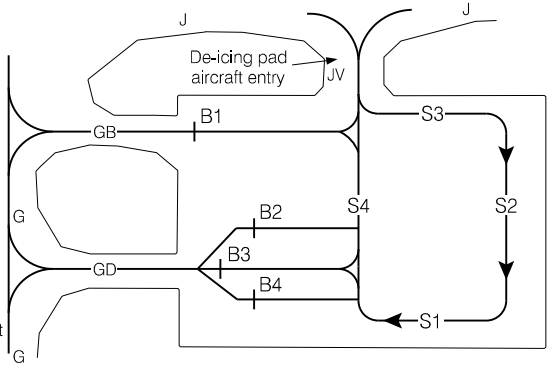

During the de-icing process, thrust setting must not exceed ground idle and/or propellers must remain feathered at all times.

Engine run-ups will only be approved by PAD CONTROL or ICEMAN when operations permit and when it is safe to do so. Engine fan blade ice shedding run-ups are prohibited on the de-ice pads.

Apron 1 Exit Routing Procedure and Restrictions (see chart below)

Routing
Apron I Advisory (121.3 - limited hours) will normally direct departing acft to a taxi position fix dependent upon active runways.
Twy JT restricted to aircraft with wingspan of 118' or less.
Twy GB is restricted to one-way westbound and to aircraft with wingspan of 118' or less.
Twy GD restricted to one-way westbound

Multilateration: Acft transponders must be kept on at all times when manoeuvring on runways, taxiways and all aprons.

AERODROME CHART — CYEG

EFF 20 APR 23

Reduced Visibility Procedures (RVR less than 2600 to 1200 ft)

If any portion of the airport drops below ½ SM or 2600 RVR but is at or above ¼ SM or 1200 RVR, the airport is considered to be operating in RVOP with no restrictions to aircraft or vehicles.

If any portion of the airport drops below ¼ SM or 1200 RVR, provided the runway of intended use is at or above ¼ SM or 1200 RVR, the following procedures shall be implemented:

- Any runway that is below ¼ SM or 1200 RVR will not be used for arrivals or departures.
- Restrictions apply to vehicles and aircraft on the manoeuvring area. Only one aircraft, helicopter or vehicle will be given permission to operate on the manoeuvring area at any given time (except as permitted below under Vehicle Exceptions).
- Towing of aircraft on the manoeuvring area is not permitted.

Departures

An aircraft may be taxied for departure if the runway of intended use is at or above ¼ SM or 1200 RVR provided no other aircraft or vehicle is on the manoeuvring area.

If the visibility drops below ¼ SM or 1200 RVR after taxi clearance was issued, the aircraft may continue to taxi.

An aircraft may depart during RVOP operations provided the RVR serving the departure runway is at or above ¼ SM or 1200 RVR.

Arrivals

An aircraft may land and taxi if the runway of intended use is at or above ¼ SM or 1200 RVR provided no other aircraft or vehicle is on the manoeuvring area.

Arrivals will be in accordance with applicable approach minima or approach ban considerations. After landing, the aircraft may taxi provided no other aircraft or vehicle is on the manoeuvring area.

If the visibility for the runway of intended use drops below ¼ SM or 1200 RVR after an arriving aircraft crosses the final approach fix (FAF), the aircraft may land and taxi in.

Vehicle Exceptions

A group of vehicles may be considered one movement provided they are traveling together and use a single call sign.

Vehicles are permitted to operate on an inactive runway. Once vehicles are established and restricted to remain on the inactive runway, RVOP may resume on the remaining manoeuvring area.

Emergency vehicles responding to emergency situations are exempt.

Source of Canadian Civil Aeronautical Data: © 2023 NAV CANADA All rights reserved

De-icing Procedures

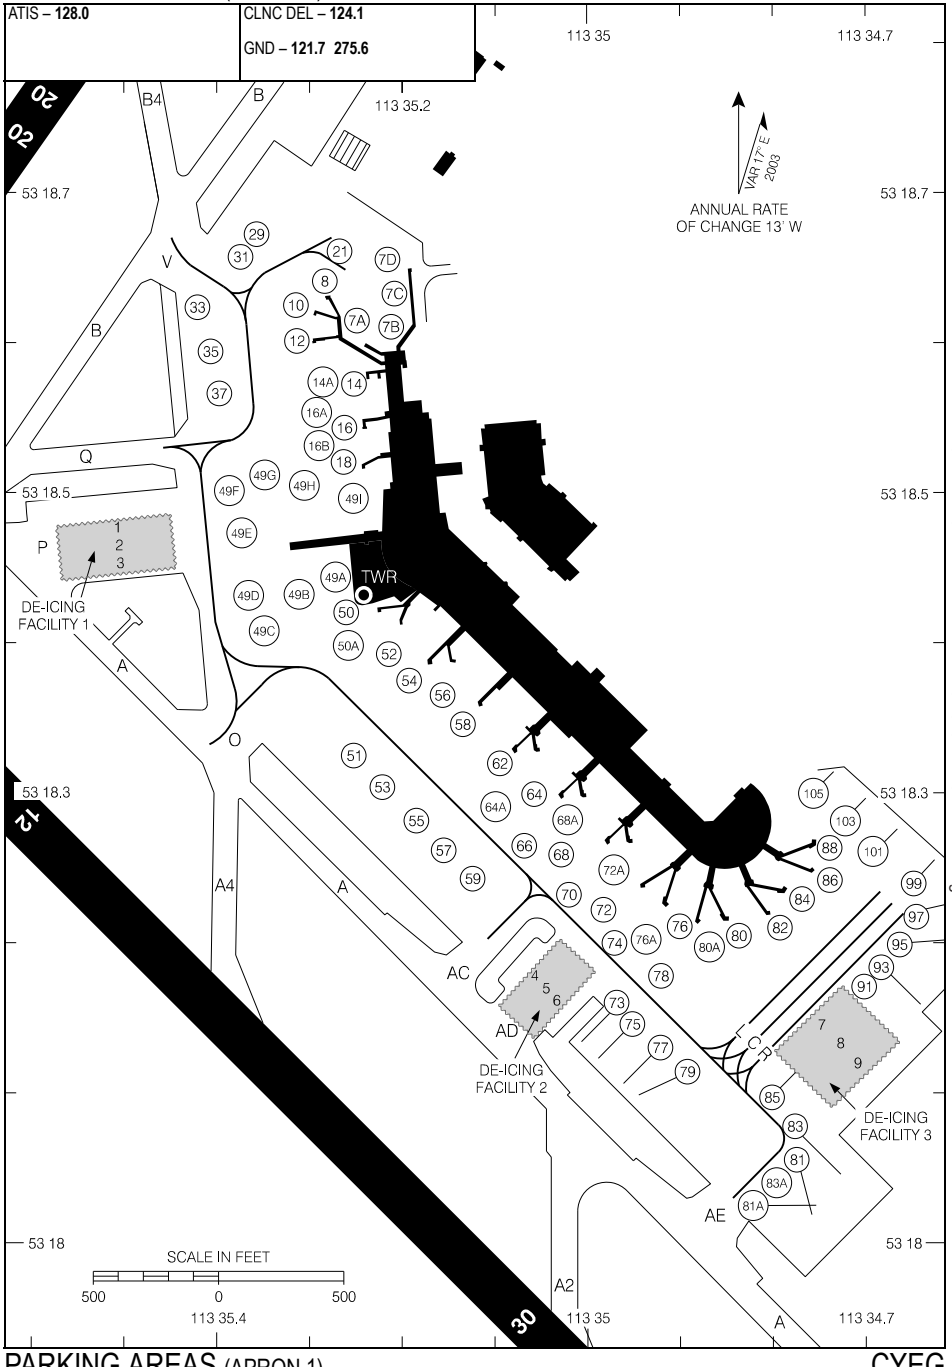

1. When de-icing is required, contact AEROMAG on 122.850 30 mins prior or as soon as possible with de-icing requirements. AEROMAG will assign the expected de-icing pad or holding area according to de-icing flow.
2. Prior to pushback and for taxi clearance contact GROUND CONTROL on 121.700 with de-icing pad assignment.
3. On the Main Apron, hold short of the assigned de-icing pad and contact AEROMAG PAD CONTROL on 122.775 (122.850 backup frequency).
4. Follow AEROMAG PAD CONTROL instructions and guidance lines to the assigned de-icing bay or staging bay and confirm "BRAKES SET" when in position. Monitor GROUND CONTROL on 121.700 at all times.
5. When directed by AEROMAG PAD CONTROL, contact ICEMAN on 130.125 (136.535 backup frequency) and confirm "BRAKES SET, AIRCRAFT CONFIGURED and ENGINES IDLE FOR DE-ICE."
6. When de-ice is complete, do not move aircraft. When directed by ICEMAN, contact AEROMAG PAD CONTROL on 122.775 (122.850 backup frequency) to obtain taxi instructions.
7. Follow AEROMAG PAD CONTROL instructions to exit de-icing. Hold short of Twy ALPHA and contact GROUND on 121.700 to obtain clearance. Holding short of Twy ALPHA is only relevant to DF1 and DF2. DF3 aircraft exit onto Apron I.

Arrival Communication Procedures

1. Aircraft arriving at YMM will exit the runway and contact ground frequency (121.9) to request taxi instructions.
2. YMM Tower (or YPE Peace River Radio during the hours of 2245-0615 local) will give taxi instructions.

Departure Communication Procedures

1. Contact ground 121.9 (or Peace River Radio 118.1 during the hours of 2245-0615 local) for runway and taxi instructions.
2. Aircraft on Apron II (North) will contact YMM Ground on 121.9 (or Peace River Radio on 118.1 during the hours of 2245-0615 local for runway and taxi instructions.

De-Ice Bay Procedure

Fort McMurray International operates a central de-icing facility which is located on the main/south ramp (Apron I) on the south side of the airport. All bays are capable of both engine on and engine off de-icing operations concurrently. All de-icing is to be accomplished at this facility.

1. De-icing is accomplished by each of the ground handling companies that operate at the Fort McMurray International Airport.
2. Coordinate any special treatment with your Ground Handler prior to taxi to the CDF.
3. Entry point to the CDF, if transitioning from the North, is via taxi-way J to Apron I – use west entrance.
4. If required to hold – the designated holding area is to your immediate right upon entering Apron I.
5. CDF flow is from west to east.
6. Contact YMM Ground on 121.9 (or Peace River Radio on 118.1 during the hours of 2245-0615 local) for runway and taxi instructions.
7. Exit is via taxi-way H.

Reduced Visibility Procedures (RVR less than 2600 to 1200 ft)

If any portion of the airport drops below ½ SM or 2600 RVR but is at or above ¼ SM or 1200 RVR, the airport is considered to be operating in RVOP with no restrictions to aircraft or vehicles.

If any portion of the airport drops below ¼ SM or 1200 RVR, provided the runway of intended use is at or above ¼ SM or 1200 RVR, the following procedures shall be implemented:

- Any runway that is below ¼ SM or 1200 RVR will not be used for arrivals or departures.
- Restrictions apply to vehicles and aircraft on the manoeuvring area. Only one aircraft, helicopter or vehicle will be given permission to operate on the manoeuvring area at any given time (except as permitted below under Vehicle Exceptions).
- Towing of aircraft on the manoeuvring area is not permitted.

Departures

An aircraft may be taxied for departure if the runway of intended use is at or above ¼ SM or 1200 RVR provided no other aircraft or vehicle is on the manoeuvring area.

If the visibility drops below ¼ SM or 1200 RVR after taxi clearance was issued, the aircraft may continue to taxi.

An aircraft may depart during RVOP operations provided the RVR serving the departure runway is at or above ¼ SM or 1200 RVR.

Arrivals

An aircraft may land and taxi if the runway of intended use is at or above ¼ SM or 1200 RVR provided no other aircraft or vehicle is on the manoeuvring area.

Arrivals will be in accordance with applicable approach minima or approach ban considerations. After landing, the aircraft may taxi provided no other aircraft or vehicle is on the manoeuvring area.

If the visibility for the runway of intended use drops below ¼ SM or 1200 RVR after an arriving aircraft crosses the final approach fix (FAF), the aircraft may land and taxi in.

Vehicle Exceptions

A group of vehicles may be considered one movement provided they are traveling together and use a single call sign.

Vehicles are permitted to operate on an inactive runway. Once vehicles are established and restricted to remain on the inactive runway, RVOP may resume on the remaining manoeuvring area.

Emergency vehicles responding to emergency situations are exempt.

Low Visibility Procedures (RVR less than 1200 to 600 ft)

Expect Delays

When low visibility procedures are in effect, ATC will restrict operations to one aircraft on the maneuvering area at a time (1 departure or 1 arrival at a time).

Departures

Only departures on Runway 36 or 18 shall be permitted. Intersection departures will not be permitted.

Although Winnipeg Tower does not control aircraft push backs or taxiing on aprons, pilots are recommended to contact Winnipeg Tower before maneuvering on Apron I.

Contact ATC for a start / taxi time.

Sequencing of Ground Movements for Take-off

Do not request start, push back or call for taxi clearance until the reported RVR is a minimum of:

Aircraft/Pilot Take-Off Minima	Minimum RVR for Start
1200 RVR	1000 RVR
600 RVR	600 RVR

"AT NO TIME SHALL A PILOT CROSS AN ILLUMINATED RED STOP BAR"

Arrivals

When Low Visibility Procedures are in effect the arrival RWY is 36 in accordance with applicable approach minima or approach ban considerations.

Winnipeg Tower will restrict operations to one aircraft on the maneuvering area at a time (1 departure or 1 arrival at a time). Approximately 6 movements per hour.

Airport Services and Equipment Available Under Low Visibility Operations

Airport Surface Detection Equipment (ASDE).

Runway Certification

Rwy	Certification
36	RVR 600
13	RVR 1200
31	RVR 1200
18	¼ SM (Based on reported visibility)

CENTRAL DE-ICING FACILITY CYWG

ATIS – **120.2**

CLNC DEL – **121.3**

GND – **121.9**
PAD CTL – **122.92**

DE-ICING BAYS	DESCRIPTION
1, 3, 4, 6	Not avbl to acft with wingspan 125' or greater.
2	Avbl to acft with wingspan 214' or greater with discretionary oversteer at entrance.
5	Not avbl to acft with wingspan 214' or greater.

DE-ICING OPERATIONS

For more information, ctc Icehouse 204-987-9436.

1. Prior to push back, notify PAD CONTROL (122.925) and WINNIPEG GND when de-icing is required.
2. Hold short of Central De-icing Facility (CDF) and ctc PAD CONTROL on 122.925.
   Note: In the event that the "Hold" light and/or inset lgt cannot be utilized, the CDF will deploy a "Follow Me" vehicle.
3. All de-icing operations are performed with acft engines running, unless otherwise advised by PAD CONTROL.
   CAUTION: all operating engines must be maintained at gnd idle thrust settings. De-icing operation limited to maximum wind gusts of 40kts.
4. Once de-icing is complete, acft will be instructed to ctc WINNIPEG GND for taxi clnc. DO NOT ENTER TWY H WITHOUT ATC CLEARANCE. MINIMUM BREAKAWAY THRUST MUST BE USED.

Low Visibility Procedures (Less than RVR 1200 to RVR 600)

Application

These procedures apply to ground movements of aircraft departing under low visibility conditions. Departures below RVR 600 are not authorized. When weather conditions indicate visibility below RVR 1200 is imminent, procedures will be implemented restricting aircraft and vehicle operations on the movement area. The following message will be added to the ATIS broadcast.
"LOW VISIBILITY PROCEDURES IN EFFECT"

General

Low Visibility Taxi Routes

Taxi routes during low visibility operations are exclusive to the following routes:

1. Route 1 – Taxiway C
2. Route 2 – Taxiway B, rwy 06, taxiway C.
3. Taxiway surfaces are painted with enhanced yellow and black centreline markings. Aircraft restricted to one movement in or out at any time during low visibility operations. Alternate routing may be specified by ATC as required.

ATC may find it necessary to suspend, restrict, or terminate low visibility operations.

Departures

When low visibility procedures are in effect all departures shall be from the displaced threshold of rwy 12. Intersection take-offs are not authorized.

Declared Distances from displaced threshold of rwy 12

Gate De-icing – Originating Flights

1. Gate de-icing is approved for environmental frost under the following conditions:
   - Active precipitation is not forecasted for the operational period.
   - Apron conditions are such as to allow the recovery of spent fluid (no snow, ice, sand, gravel, etc.).
   - The required fluid to de-ice is optimal for the presenting frost and up to the minimum 1 litre/square metre.
   - Winds are light to variable (8 knots).
2. De-icing for originating flights will take place 60-90 minutes before scheduled departure time.
3. Staff will conduct initial inspection of acft to determine the requirement for de-icing and will proceed with spray if rqrd.
4. Airlines must ensure acft are configured and ready for de-icing prior to the above time. De-icing will take place under the assumption that originating flights are configured.
5. De-icing confirmation will be sent electronically or via fax to airline operations following de-icing. Flight crews requiring additional information may contact PAD CONTROL on 122.92.
6. No holdover time is provided for on gate de-icing.
7. The process of **"Pre-Spray"** (Lines 2-3) 60-90 mins before push is being reviewed due to frost regeneration (fall weather patterns with high humidity and close OAT/DP spread).
8. Unless requested of de-ice crews, the PIC is responsible for **"Pre-flight take off inspections."** Any treatments by de-ice crews for Pre-Sprays will be followed by an **"appropriate post de-ice inspection."** The **"Pre-Spray"** treatments 60-90 mins before push do not include a **"pre-take off"** inspection.

Gate De-icing – Turn Flights

1. All conditions of gate de-icing exist from above list.
2. De-ice crews will not interact with turn aircraft unless requested – Contact PAD CONTROL on 122.92 to arrange. There will be no pre-emptive contact with the aircraft without request for service. Pre-take off De-ice check remains with the flight crew unless a live spray is completed at pushback.

Centralized De-icing Facility Operations

1. Flow – North to South
   - Entry point is K or AA via Alpha. Acft must hold short of the CDF on the entry point and establish radio contact with PAD CONTROL on 122.92.

   Flow – South to North
   - Entry point is CC or BB via Alpha. Acft must hold short of the CDF on the entry point and establish radio contact with PAD CONTROL on 122.92.
2. Follow taxi instructions via East Line to Bays 1, 2, 3 via West Line Bays 4, 5, 6.
3. Aircraft will be staged on the East/West Line short of AA/BB when necessary.
4. When exiting CC/K – Acft must maintain listening watch on the E/W staging lines on 122.92 until reaching Twy A.

NOTE: Aircraft intended on returning to terminal gates after de-icing must drip dry for 25 minutes on CDF.

Source of Canadian Civil Aeronautical Data: © 2023 NAV CANADA All rights reserved

De-icing Requirements

1. Wings and Stabs refers to the upper surfaces of the wings, upper/lower surface of the Horizontal Stabilizers and both sides (including rudder) of the Vertical Stabilizer.
2. Fuselage includes all components from the front cabin doors aft and Wings and Stabs.
3. Full Body includes the cockpit/radome plus Fuselage, Wings and Stabilizers.
4. Individual treatments like “inspections only”, “radome”, “winglets” can be done upon request.
5. Hard leading edges tactiles/underwing inspections and treatments may require engine shut down if inlet is in close proximity to surface requiring attention.

OTTAWA/MACDONALD-CARTIER INTL, ON

DE-ICING OPERATIONS

CYOW

ATIS – **121.15** (En)
132.95 (Fr)

GND – **121.9**
PAD CTL – **122.92**
ICEMAN – **122.35**

DE-ICING OPERATIONS

1. Ctc PAD CONTROL on 122.925 30 min prior to dep if de-icing is rqrd. Notify of any special treatments prior to taxi to CDF.
2. Ctc Ottawa GND after pushback for taxi to CDF.
3. Hold short of the CDF on K, AA, BB or CC and ctc PAD CONTROL for further taxi.
4. Follow instructions and electronic sign boards to de-icing bays.
5. Stop on the 2nd (illuminated) yellow stop bar, immediately set brakes and advise PAD CONTROL. DO NOT MOVE ACFT. This will allow positioning of trucks while you configure your aircraft.
6. Once instructed switch to ICEMAN on 122.350, confirm brakes are set, confirm treatment and that acft is configured for treatment (engines at idle/props feathered/pacs off). If you can't reduce engines to idle ICEMAN must know, de-icing may not be possible with running engines.
7. After de-icing, configure acft for taxi, however, DO NOT MOVE ACFT.
8. Once instructed, ctc PAD CONTROL for taxi.
9. Follow instructions to designated exit point. Holding short of Twy A, ctc GND 121.9.

TYPE 1 - All Clear Lift-Off E188

TYPE IV - UCAR ADF ENDURANCE EG106 100%

BAY RESTRICTIONS

Bay 1, 3, 4, 6 - May be used by acft with wingspans 36m (118') or less.

Bay 2 - May be used by acft with the wingspans 65m (213') or less. If CC/K used, the Taxi must be on the West taxi line only with crossover to/from Bay 2.

Bay 5 - May be used by acft with the wingspan 80m (262') or less. If CC/K used, taxi must be on the west taxi line only with crossover to/from Bay 5.

AD HOC FLIGHTS

1. Obtain a projected acceptance time for de-icing from PAD CONTROL on 122.925 or via phone 613-248-0228 .
2. Submit Authorization form via fax 613-248-0860 or via e-mail YOW_InlandOps@Inlandgroup.ca.
3. An estimate of litres required will be provided to flight crew.
4. Ad hoc aircraft not abiding by the above may be denied service at the CDF.

Source of Canadian Civil Aeronautical Data: © 2023 NAV CANADA All rights reserved

Dégivrage à la barrière – vols cédulés

1. Le dégivrage aux portes d'embarquement est approuvé pour le givre dans les conditions suivantes :
   - Les précipitations actives ne sont pas prévues pour la période opérationnelle.
   - Les conditions du tablier sont telles qu'elles permettent de récupérer le fluide usé (pas de neige, de glace, de sable, de gravier, etc.).
   - Le liquide de dégivrage requis est optimal pour le givre présent et ce, jusqu'à un minimum de 1 litre / mètre carré.
   - Les vents sont de légers à variables (8 nœuds).
2. Dégivrage pour les vols cédulés aura lieu 60 – 90 minutes avant l'heure de départ cédulé.
3. Technicien doit faire une inspection initiale de l'appareil pour déterminer les besoins en dégivrage et vont procéder au dégivrage si requis.
4. Les sociétés aériennes doivent s'assurer que l'appareil est configuré et prêt pour le dégivrage. Le dégivrage va avoir lieu en prenant compte que les vols cédulés sont configurés.
5. La confirmation de dégivrage sera envoyée électroniquement ou par fax à la société aérienne après le dégivrage. L'équipage requérant de l'information additionnelle peut contacter CTL DÉGIVRAGE sur 122.92.
6. Aucun temps d'efficacité n'est fourni pour le dégivrage à la barrière.
7. Le processus de **« Pré-application »** (lignes 2-3), 60-90 minutes avant le refoulement est en cours de révision en raison de la régénération du givre (conditions météorologiques automnal, incluant une forte humidité et une relation étroite entre la TAE / PR).
8. À moins que les équipes de dégivrage ne le demandent, le commandant de bord est responsable des **« inspections avant le décollage »**. Tout traitement effectué par les équipes de dégivrage pour les pré-applications sera suivi d'une **« inspection post-dégivrage appropriée »**. Les traitements de **« pré-application »** de 60 à 90 minutes avant le refoulement n'incluent pas une inspection de **« pré-décollage »**.

Dégivrage à la barrière – vols en transit

1. Toutes les conditions de dégivrage aux portes d'embarquement existent depuis la liste ci-dessus.
2. Les équipes de dégivrage n'interagiront pas avec le virage des avions à moins que cela ne soit demandé – Contactez PAD CONTROL sur 122.92 pour organiser la manoeuvre. Il n'y aura pas de contact préventif avec l'aéronef sans demande de service. La vérification de dégivrage avant le décollage demeure à l'équipage de l'aéronef à moins qu'une application directe soit complétée au refoulement.

Source des données aéronautiques civiles pour le Canada : © 2023 NAV CANADA Tous droits réservés

Opération au centre de dégivrage

1. Circulation – Nord vers Sud
   - Point d'entrée est K ou AA via Apha. L'appareil doit se tenir à l'écart du CDF au point d'entrée et établir le contact radio avec CTL DÉGIVRAGE sur 122.92.

   Circulation – Sud vers Nord
   - Points d'entrée est CC ou BB via Alpha. L'appareil doit se tenir à l'écart du CDF au point d'entrée et établir le contact radio avec CTL DÉGIVRAGE sur 122.92.
2. Suivre les instructions pour le taxi via la ligne Est pour les baies 1,2,3 ou via la ligne Ouest pour les baie 4,5,6.
3. L'appareil sera mis en attente sur la ligne Est/Ouest à l'écart de AA/BB lorsque nécessaire.
4. À la sortie de CC / K – L'aéronef doit rester attentif aux lignes d'arrêt E / W et au 122.92 jusqu'à ce qu'il atteigne le Twy A.

Note : L'appareil qui doit retourner à la barrière doit rester au CDF pendant 25 minutes afin d'assécher l'appareil

Besoins en dégivrage

1. Ailes et Stabilisateurs se réfère aux surfaces supérieures des ailes, aux surfaces supérieures / inférieures des Stabilisateurs Horizontaux et des deux côtés (y compris le gouvernail) du Stabilisateur Vertical.
2. Le Fuselage comprend toutes les composantes, des portes de cabine avant vers l'arrière ainsi que les Ailes et Stabilisateurs.
3. L'appareil complet comprend la cabine de pilotage, le radôme ainsi que le Fuselage et les Ailes et Stabilisateurs.
4. Des traitements individuels tels que « inspections seulement », « radôme », « ailettes » peuvent être effectués sur demande.
5. Les inspections tactiles et les traitements sous les ailes peuvent nécessiter la fermeture d'un moteur si l'entrée est à proximité de la surface nécessitant une attention.

OPÉRATIONS DE DÉGIVRAGE CYOW

ATIS – **132.95** (Fr) **121.15** (Ang)

GND – **121.9**
PAD CTL – **122.92**
ICEMAN – **122.35**

1. Ctc CTL DÉGIVRAGE 122.925 30 min avant le dép si dégivrage est requis. SVP aviser de tout traitement spécial avant de rouler à l'installation centrale de dégivrage.
2. Ctc Ottawa SOL, après refoulement pour circuler au CDF.
3. Rester à l'écart du CDF sur K, AA, BB ou CC et ctc CTL DÉGIVRAGE pour circuler.
4. Suivez les instructions et les panneaux électroniques pour procéder à la baie de dégivrage.
5. Arrêtez-vous sur la deuxième barre d'arrêt jaune (éclairée), actionnez immédiatement les freins et confirmez avec PAD CONTROL. NE PAS BOUGER l'AÉRONEF. Cela permettra de positionner les camions pendant que vous configurez votre avion.
6. Une fois qu'on vous le demande, passez à ICEMAN au 122.350. Confirmez que les freins sont serrés, le traitement désiré et que votre avion est configuré pour le traitement (Moteurs au ralenti / hélices mises en drapeau). Si vous ne pouvez pas réduire les moteurs au ralenti, avisez ICEMAN, il se peut que le dégivrage ne soit possible avec les moteurs en marche.
7. Après dégivrage, configurez l'appareil pour circuler, toutefois, NE PAS BOUGER L'APPAREIL.
8. Une fois avisé, ctc CTL DÉGIVRAGE pour circuler.
9. Suivre les instructions pour le point de sortie désigné. À l'écart de la voie de circulation A ctc SOL 121.9.

TYPE 1 - All Clear Lift-Off E188	TYPE IV - UCAR ADF ENDURANCE EG106 100%

RESTRICTIONS DES BAIES DE DÉGIVRAGE

Baies 1, 3, 4, 6 - Peuvent être utilisées par les aéronefs d'envergure de 36m (118') ou moins

Baie 2 - Peut être utilisé par un aéronef ayant une envergure de 65m (213 pi) ou moins. Si CC / K est utilisé, le taxi doit être sur la ligne de taxi Ouest uniquement avec un croisement vers / depuis la baie 2.

Baie 5 - Peut être utilisé par un aéronef ayant une envergure de 80m (262 pi) ou moins. Si CC/K est utilisée, le taxi doit être sur la ligne de taxi Ouest uniquement avec un croisement vers/de la baie 5.

VOLS AD HOC

1. Obtenir une heure projetée pur le dégivrage en contactant CTL DÉGIVAGE sur 122.925 ou par téléphone au 613-248-0228.
2. Soumettre le formulaire d'autorisation par fax au 613-248-0860 ou par courriel à YOW_inlandOps@Inlandgroup.ca.
3. Un estimé des litres de glycol requis sera transmis à l'équipage.
4. Un vol AD HOC ne se conformant pas à la procédure ci-haut mentionné, peut se voir refuser l'accés au centre de dégivrage.

AERODROME CHART — CYTZ

EFF 22 APR 21

Toronto/Buttonville Initial Take-Off Area (ITOA)

Purpose

The purpose of this notice is to allow aircraft operators at Toronto/Buttonville Municipal Airport to:

1. Utilize the 161' of paved strip end portion prior to the threshold of Runway 15 for aircraft take-off manoeuvers;
2. Use the new declared distances terminology stated below in order to take into consideration the area prior to the threshold of Runway 15, and;
3. The 161' of paved strip end portion has the same pavement bearing strength as the runway, exceeds the runway width due to the extension of the fillet from taxiway D and is maintained to the same standard as the runway.The subject area is referred to as the Initial Take-Off Area (ITOA) and is defined below.

Visual Aids

The area for runway 15 that can be used for departure operations is marked with a white transverse stripe, located 161' from the end of the pavement. This defines the limits of the usable length for aircraft operations. Six (6) red, unidirectional and medium intensity edge lights outline the 161' paved area. Runway 15 end lights have been inset.

The expanded taxiway adjoining the threshold of Runway 15 allows the pilot to either enter the pre-threshold Initial Take-Off Area (ITOA), just north of the white transverse stripe (at the actual runway threshold) or, taxi directly onto the runway at the original threshold.

Definitions

Initial Take-Off Area (ITOA): A prepared area prior to a threshold, which is available for aircraft take-off manoeuvres as a supplemental distance to the TORA, TODA and ASDA. The new declared distances that will include the ITOA shall be declared as ETORA, ETODA, EASDA (the prefix E means Extended). This extended distance shall not be applied to any declared landing distance available for the reciprocal runway.

Extended Take-Off Run Available (ETORA): The length of the runway declared available and suitable for the ground run of an airplane taking-off, including the Initial Take-Off Area (ITOA).

Extended Take-Off Distance Available (ETODA): The length of the take-off run available, including the Initial Take-Off Area (ITOA), plus the length of the clearway, if provided.

Extended Accelerate-Stop Distance Available (EASDA): The length of the take-off run available, including the Initial Take-Off Area (ITOA), plus the length of the stopway, if provided.

Declared Distances - CYKZ - Rwy 15

Extended Take-Off Run Available (ETORA) - **4058**.

Extended Take-Off Distance Available (ETODA) - **4258**.

Extended Accelerate-Stop Distance Available (EASDA) - **4058**.

Notes

Twy “K” is uncontrolled and is restricted to aircraft with wingspans of 41.15m/135ft (B757W) or less and an Aircraft Load Rating of 9.0 or less. Other aircraft may be authorized with prior approval from operator (416) 776-3056.

Discretionary oversteering required for aircraft with wingspans 38m/124ft (B757) or greater:

- Rwy 06L onto “E”, “D3” and “D5”.
- Rwy 24R onto “D3”, “E”, “D4” and “D10/D8 southbound”.

A340-500/600, A350-900/1000, B777-300, and A380 discretionary oversteering required at all intersections.

Specific aircraft operations plan in effect for aircraft with wingspans 65m/214ft up to 79.9m/262ft. Restrictions in place include;

- No holding short of Runway 06L/24R after exit from Runway 06R/24L.
- Aircraft (as defined above) operations on any parallel taxiway system, such as Alpha-Bravo, Charlie-Delta, or Delta-Victor (Alpha to Echo), restrict operations on adjacent taxiway to aircraft with wingspans less than 36m.
- Strict adherence to taxiway centre line is required all times.
- Discretionary oversteering is required at all intersections.
- No taxiing on apron taxi lane between AJ and AK (between gates C31-C34).
- No taxiing on apron taxi lane between AJ and AT (between gates B15-B18).
- No turns from twy E onto CDF Pads 1 through 6.
- When aircraft on CDF taxilane 5, CDF taxilane 6 restricted to A320 or smaller (wingspan of 34.1m) and vice versa.The same applies to taxilanes 7 and 8, and vice versa.
- No taxiing on twy D between twy D4 and twy E.
- No taxiing on twy B between rwy 05/23 and twy J.
- When aircraft taxiing within Holding Bays rwys 06L/24R/05, adjacent parallel taxilane restricted to aircraft with wingspans less than 36m.
- Tow only authorized onto parking stands H1 and H6.

While taxiing on twy V (Pad 1) and twy T (Pad 5) through the CDF strict adherence to the centreline is required. When in contact with ATC use Centre Lane. When in contact with Pad Control or Iceman, use assigned Lane. Pad 1 (twy V) and Pad 5 (twy T) Centre Lane will accommodate aircraft with wingspans 79.9m/261ft and smaller. Aircraft with wingspans less than 36m may use North/South Lanes.

Source of Canadian Civil Aeronautical Data: © 2023 NAV CANADA All rights reserved

Hot Spots

Note: HS 4 to 8 - Short distance between parallel runways. Manage your taxi speed. Expect to hold short of parallel runway.

HS 1 – Taxiing northbound on rwy 33R aircraft fail to hold short of and incur on rwy 05/23.

HS 2 – Taxiing northbound on twy B aircraft miss turn onto twy H and incur on rwy 05/23.

HS 3 – Taxiing eastbound on twy H aircraft continue onto twy Q and incur on rwy 23.

HS 4 – Exiting rwy 24L onto twy D8 aircraft fail to hold short of and incur on rwy 06L/24R.

HS 5 – Exiting rwy 24L onto twy D4 aircraft fail to hold short of and incur on rwy 06L/24R.
Note: Angled rwy hold position in effect on twy D4 south of rwy 06L/24R.

HS 6 – Exiting rwy 06R onto twy D3 aircraft fail to hold short of and incur on rwy 06L/24R.

HS 7 – Exiting rwy 06R onto twy D5 aircraft fail to hold short of and incur on rwy 06L/24R.
Note: Angled rwy hold position in effect on twy D5 south of rwy 06L/24R.

HS 8 – Taxiing southbound on twy D7 aircraft fail to hold short of the 24L approach hold line and incur on rwy 06R/24L.

TAXI CHART

CYYZ

EFF 20 APR 23

Low Visibility Procedures (RVR less than 1200 to 600 ft)

Application

These procedures apply to ground movements of aircraft arriving and departing under low visibility conditions. Arrivals and departures below RVR 600 are not authorized. When weather conditions indicate visibility below RVR 1200 is imminent, procedures will be implemented restricting aircraft and vehicle operations on the movement area. The following message will be added to the ATIS broadcast:

"LOW VISIBILITY PROCEDURES IN EFFECT"

General

Low Visibility Taxi Routes

Typical taxi routes are shown on the Low Visibility Taxi Charts. Taxiway surfaces are painted with enhanced yellow and black centerline markings. In addition, taxiways A, C, F, H, J, N, T, P, R, S, V, E, D, B, T1, and T3 aprons are equipped with green centreline lights. Yellow in-set taxiway intersection lights that consist of three lights spaced 1.5 meters apart at 90 degrees to the direction of travel are located at taxiway/taxiway intersections and apron entry/exit points coincident with lighted locations signs. Aircraft may be directed to hold or report by any of these positions.

Airport Surface Detection Equipment (ASDE)

Ground radar is used to monitor the position of aircraft operating on the manoeuvring area. In the event of an ASDE failure, ATC may suspend, restrict or terminate low visibility operations.

Departures

When low visibility procedures are in effect the Departure runways are 05, 06L and 33R. Intersection take-offs from 06L are not authorized. Intersection take-offs on 33R from Victor Taxiway and on 05 from H6 may be assigned by ATC.

Sequencing of Aircraft Ground Movements for Take-off

Do not request start, push back or call for taxi clearance until the reported RVR is greater than:

Aircraft/Pilot Take-off Minima	Minimum RVR for Start
1200 RVR	1000 RVR
600 RVR	600 RVR

Stop Bar/Guard Light system

Each taxiway entrance onto runways 05, 06L and 33R is equipped with a stop bar consisting of red in-set lights and red elevated lights located at the taxi holding position. Yellow flashing runway guard lights (wig-wags) are installed at each end of the stop bar. When the red stop bar lights are illuminated, green lead on lights beyond the stop bar are extinguished. When ATC issues a clearance to proceed onto the runway, the red stop bar lights will be extinguished and the green lead on lights beyond the stop bar will be illuminated. The stop bar is reset automatically as the aircraft moves onto the runway.

"AT NO TIME SHALL A PILOT CROSS AN ILLUMINATED RED STOP BAR"

Arrivals

When low visibility procedures are in effect the Arrival runways are 05 and 06L. For 05, approved exits are Taxiways F (northbound), H3, B, H/J and Q. For 06L, approved exits are Taxiways C1, C3 and C7. Aircraft exiting either runway must proceed beyond the alternating green and yellow centreline lights to ensure the aircraft is clear of the runway and the ILS sensitive area.

CENTRAL DE-ICING FACILITY (CDF)

Overview

All de-icing ops are performed with acft engines oprg, unless otherwise advised by Pad Control or ICEMAN.

Pad 1 & 5

- Centre lane will accommodate all acft.
- Acft with wingspans less than 36m may use North/South lanes.

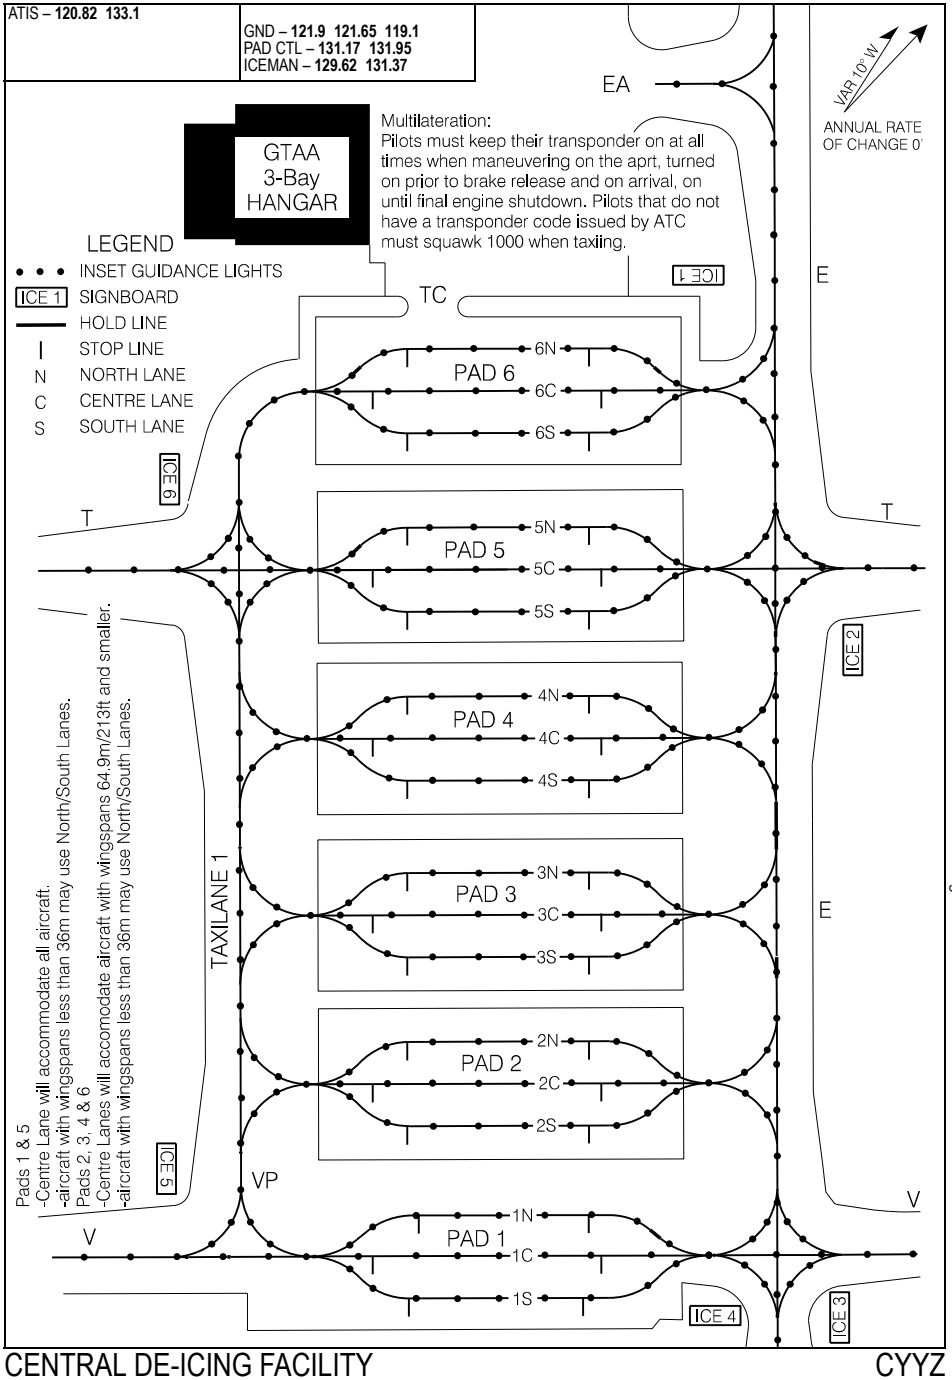

Pad 2, 3, 4 & 6

- Centre lanes will accommodate acft with wingspans 64.9m/213ft and smaller.
- Acft with wingspans less than 36m may use North/South lanes.

1. Prior to departing Parking Position, ctc CLNC DEL/APRON/GND (as applicable) and advise, "ACFT DE-ICING REQUIRED".
2. On twys T, V and E, hold short of ICE# and when directed by Ground Control monitor Pad Control on 131.17. Follow Pad Control taxi instructions to the entrance of the de-icing pad.
3. When directed by Pad Control, ctc ICEMAN on the assigned freq. (129.62 or 131.37).
4. Follow verbal instructions, guidance displays and lights (as applicable) into staging and/or de-icing bays.
5. Once aircraft is in final stop position, brakes are set and aircraft configured for de-icing, ctc ICEMAN and advise, "BRAKES SET, ACFT CONFIGURED, READY TO DE-ICE". At this time, pass along any specific fluid and/or treatment requirements.
6. After de-icing, do not move aircraft. Ctc Pad Control on 131.17 when instructed by ICEMAN to obtain taxi instruction.
7. Follow Pad Control instruction designated exit points. When instructed by Pad Control ctc Ground Control on assigned freq.
8. Specific aircraft operations plan in effect for aircraft with wingspans 65m/214ft up to 79.9m/262ft. Restrictions in place include:
   - For Central De-icing Facility (CDF) operations, no turns from twy E into any of the de-icing pads are permitted. The only taxi routes permitted for de-icing are via twy T into Pad 5 and via twy V into Pad 1.

ENGINE FAN BLADE ICE SHEDDING PROCEDURES CYYZ

Single engine taxi operations should not be used during contaminated airfield conditions or when operations require the crossing of active runways. This will enhance safety and reduce the likelihood of engine inlet contamination during active precipitation, while eliminating any requirement to conduct engine-start activities on the airfield.

The completion of aircraft engine run-up for engine fan blade ice shedding must be conducted on taxiway areas as outlined in the Engine Fan Blade Ice Shedding Chart. Strict adherence to the centerline is mandatory during engine fan blade ice shedding. Proper coordination with air traffic control (ATC) (clearance delivery, ground, or tower) is required.

On initial contact with Clearance Delivery (121.3 MHz), flight crews shall advise:

- De-icing requirements
- Run-up requirement prior to take-off
- Duration of run-up (if required)

Subsequently, if engine run-up requirements change, flight crews shall notify ATC as soon as practicable. The Airport Authority will ensure engine fan blade ice shedding areas in use are inspected and treated as required. Should taxiway surface conditions make engine run-up unsafe, flight crews shall coordinate with ATC to have the run-up conducted at the takeoff position.

Departing Rwy 06L or 06R Ice Shed Area (IS) see chart.

- IS1 Taxiway F between Taxiway T and Taxiway V.
- IS2 Taxiway D at the Runway 06L CAT II/III hold line.
- IS6 Taxiway B between Taxiway T and Taxiway V.
- IS11 Taxiway D between Runway 33R approach hold line and Taxiway A.

Departing Rwy 24R or 24L Ice Shed Area (IS) see chart.

- IS3 Taxiway D between Taxiway D3 and Taxiway D5.
- IS6 Taxiway B between Taxiway T and Taxiway V.
- IS11 Taxiway D between Runway 33R approach hold line and Taxiway A.
- IS12 Taxiway C between Taxiway D3 and Taxiway C3.

Departing Rwy 23 Ice Shed Area (IS) see chart.

- IS4 Taxiway A between Taxiway AE and Taxiway H.
- IS8 Taxiway F between Taxiway N and Taxiway FA.
- IS9 Taxiway N between Taxiway F and Taxiway E.

Departing Rwy 05 Ice Shed Area (IS) see chart.

- IS1 Taxiway F between Taxiway T and Taxiway V.
- IS5 Taxiway H between Taxiway H4 and Runway 05 CAT III hold line.
- IS8 Taxiway F between Taxiway N and Taxiway FA.
- IS9 Taxiway N between Taxiway F and Taxiway E.
- IS10 Taxiway H between Taxiway H2 and Taxiway H4.

CARTE D'AÉRODROME — CYMX

EFF 23 FÉV 23

Operations in Reduced and Low Visibility Conditions

- Runway 06 is certified for use in low visibility operations (RVR600).
- Runway 24 is certified for use in reduced visibility conditions (RVR1200).
- Plan activation is mandatory when one of the RVR readings or the reported ground visibility is below ½ SM. Runways 24 and 06 can be used.
- When the reading of one of the RVR readings or the reported ground visibility is less than ¼ SM while remaining at or above ⅛ SM, runway 06 must be used.
- Only one aircraft movement (RVOP and LVOP) is authorised on the manoeuvring area. In low visibility operation (LVOP), it is mandatory that the "Follow Me" vehicle escorts the aircraft.
- With the exception of aircraft returning to aprons, movement of all traffic ceases when one of the RVR reading or the reported ground visibility is below ⅛ SM.
- When the two RVR readings or the reported ground visibility increases and indicates ½ SM or more, normal operations may resume.
- Taxiway I is used for eastbound traffic as published in the CFS.
- Taxiway J is used for westbound traffic as published in the CFS.

Source of Canadian Civil Aeronautical Data: © 2023 NAV CANADA All rights reserved

Opérations en conditions de visibilité réduite et faible

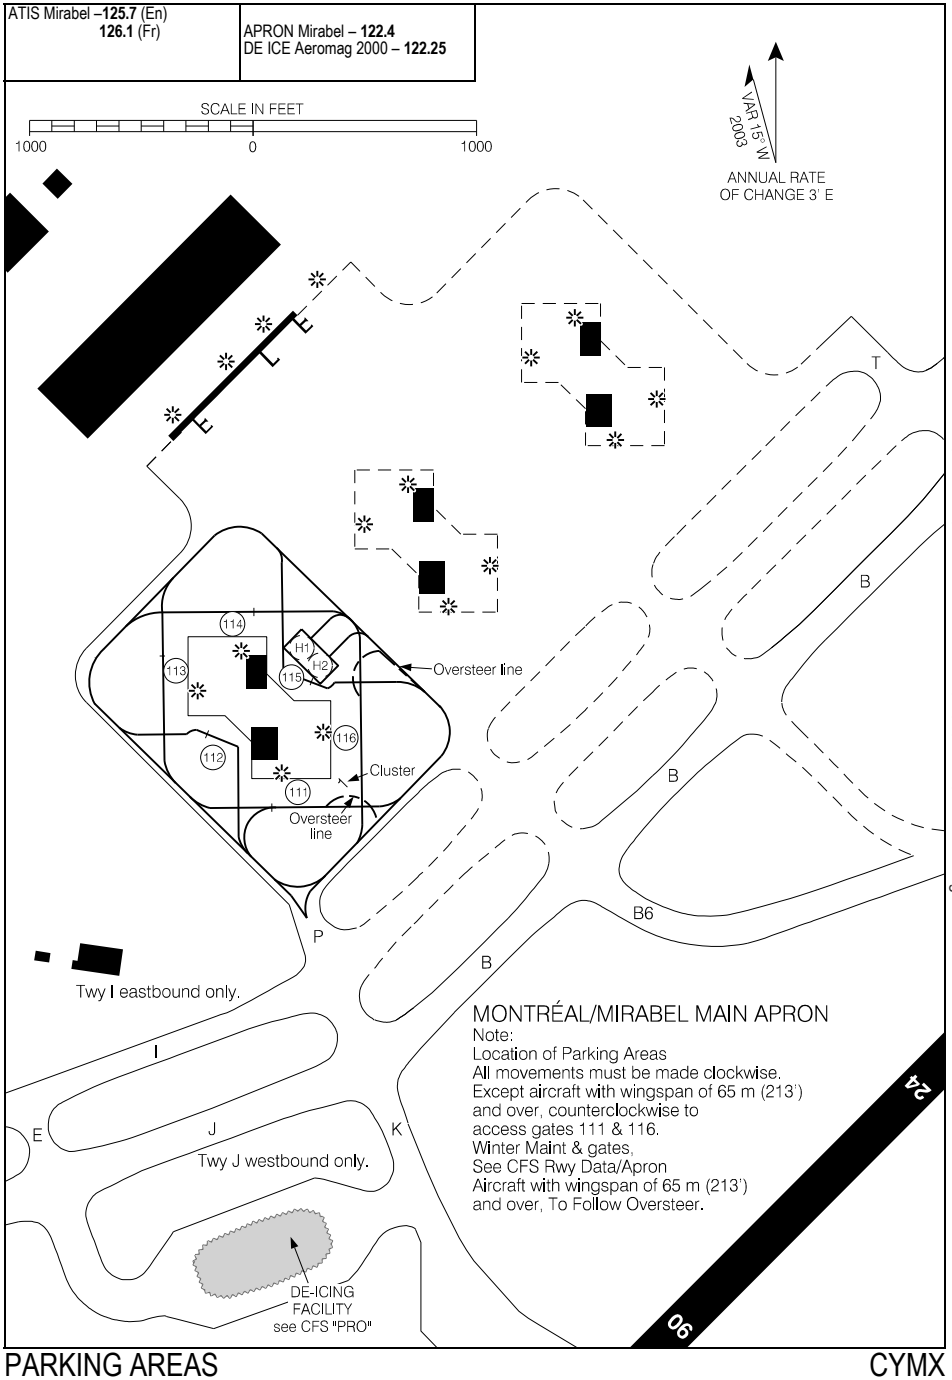

- La piste 06 est homologuée pour les opérations en conditions de visibilité faible (RVR600).
- La piste 24 est homologuée pour les conditions en conditions de visibilité réduite (RVR1200).
- Le plan est déclenché lorsque la lecture d'un des RVR ou la visibilité au sol signalée est inférieure à ½ SM. Les pistes 24 ou 06 peuvent être utilisées.
- Lorsque la lecture d'un des RVR ou la visibilité signalée au sol est de moins de ¼ SM mais de plus de ⅛ SM, la piste 06 doit être utilisée.
- Un seul mouvement d'aéronef à tout moment (RVOP et LVOP) est autorisé sur l'aire de manœuvre. En condition de faible visibilité (LVOP), il doit obligatoirement être escorté d'un véhicule « Follow Me ».
- À l'exception des mouvements associés au retour des aéronefs aux aires de trafic, toute circulation au sol est interrompue lorsque la lecture d'un des RVR ou la visibilité signalée au sol est de moins de ⅛ SM.
- Lorsque la lecture des deux RVR ou que la visibilité signalée au sol augmente et indique ½ SM ou plus, le retour aux opérations normales peut être initié.
- La voie de circulation I est utilisée par le trafic en direction Est tel que publié au CFS.
- La voie de circulation J est utilisée en direction Ouest tel que publié au CFS.

Notes

Widebody Aircraft:

A380, A124, A346, B748 & B773 – Right turn prohibited from A4 or A2 to A.

A380, A124, A346, B748 & B773 – Left turn difficult from A1 to A. Use of A3 or holding bay 24L recommended.

A380, A340-500/600, A350-1000 & B777 – Right turn prohibited from A4 to D.

Code F aircraft – Standard routes. Follow ATC and Apron Control instructions.

A380 – It is mandatory to use the procedures for runway widths of 58 m or less without paved shoulders. (All runways 60 m wide with 7.5 m shoulders: first meter paved, remaining, grass).

Minimum Rwy to Twy Separation			
	Rwy	**Twy**	**Separation (m)**
1	06L – 24R	B	225
2	06R – 24L	A	232
3	10 – 28	H	190
4	06L – 24R	North Ramp	210
5	06R – 24L	AM	233
6	10 – 28	North Ramp	182.5

Minimum Twy to Twy Separation			
	Twy	**Twy**	**Separation (m)**
1	I	H	195.9
2	K	J	195.8
3	A	D	85.6

Minimum Twy to Taxilane Separation			
	Twy	**Taxilane**	**Separation (m)**
1	North Ramp	South taxilane*	80.5
2	AM	East Holding point*	80.6
* closed during code F Aircraft operations			

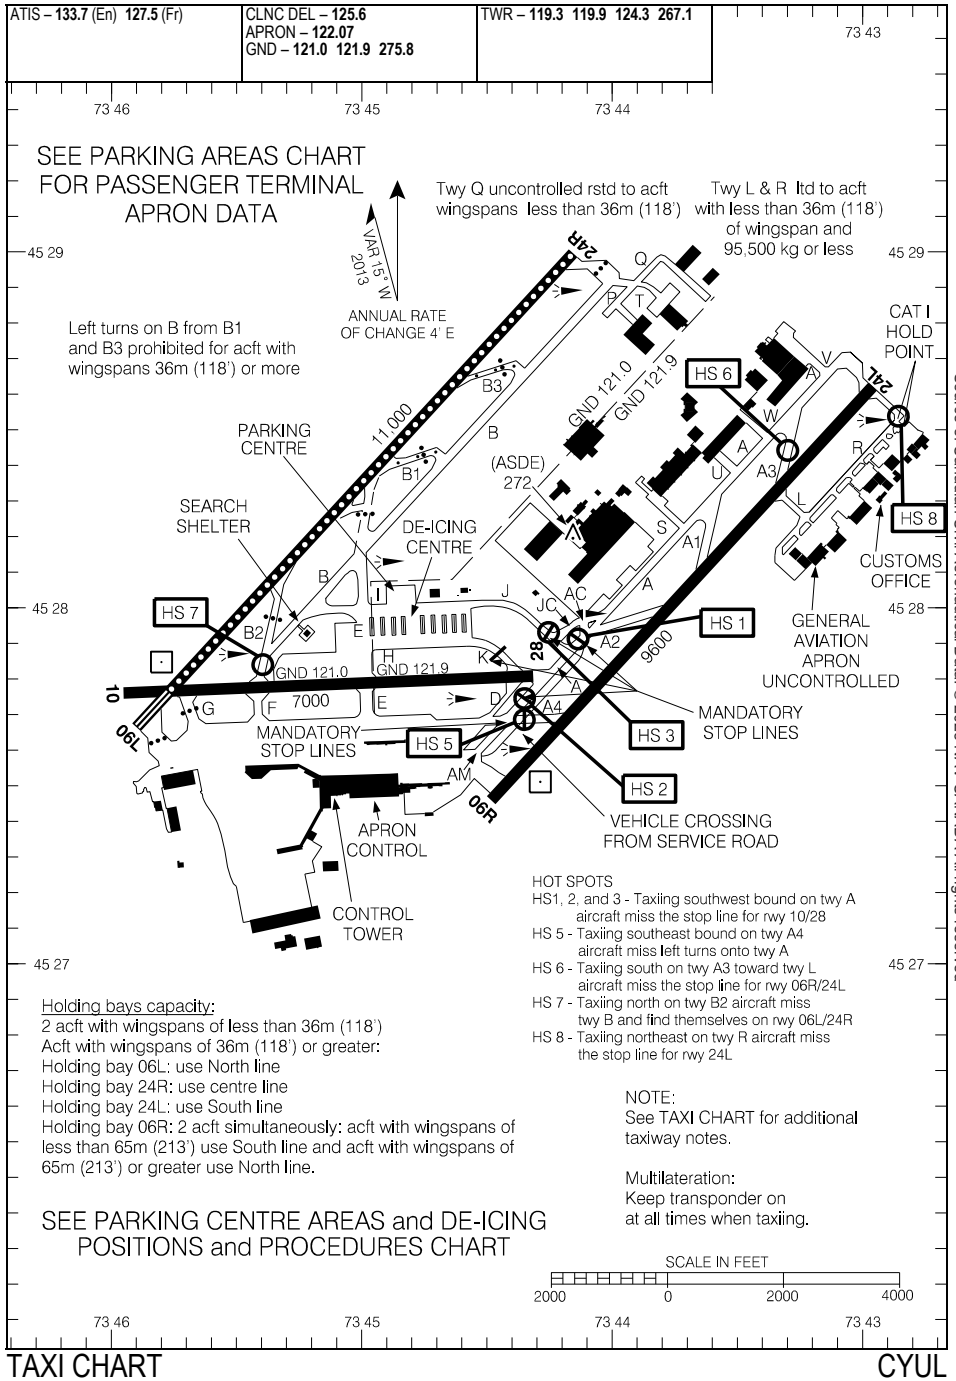

Minimum Twy to Obstacle Separation			
	Twy	**Obstacle**	**Separation (m)**
1	G	T395	50.9
2	A	Road 630*	47.5
3	North Ramp	Road E1 to E3*	43.3
4	North Ramp	Road, stands 17 to 27*	47.7
5	Ramp NW – SE	Road, stands 11B to 15*	47
6	Ramp NW – SE	Road, stands 15 to 15B*	42.5
* closed during code F Aircraft operations

CARTE DE CIRCULATION — CYUL

ATIS – **127.5** (Fr) **133.7** (Ang)	CLNC DEL – **125.6** AIRE DE TRAFIC – **122.07** GND – **121.0 121.9 275.8**	TWR – **119.3 119.9 124.3 267.1**

POINTS CHAUDS

HS1, 2 et 3 - Les aéronefs circulant en direction sud-ouest sur la voie A manquent la ligne d'arrêt pour la piste 10/28.

HS 5 - Les aéronefs circulant en direction sud-est sur la voie A4 manquent le virage à gauche sur la voie A.

HS 6 - Les aéronefs circulant en direction sud sur la voie A3 vers la voie L manquent la ligne d'arrêt pour la piste 06R/24L.

HS 7 - Les aéronefs circulant en direction nord sur la voie B2 manquent le virage sur la voie B et se retrouvent sur la piste 06L/24R.

HS 8 - Les aéronefs circulant en direction nord-est sur la voie R manquent la ligne d'arrêt pour la piste 24L.

Capacité des baies d'attente:
2 aéronefs de moins de 36m (118') d'envergure
Aéronefs de 36m (118') ou plus d'envergure:
Baie d'attente 06L: utiliser ligne nord
Baie d'attente 24R: utiliser ligne centre
Baie d'attente 24L: utiliser ligne sud
Baie d'attente 06R: 2 aéronefs simultanés, aéronef de 65m (213') et moins d'envergure utiliser la ligne sud, aéronefs de 65m (213') d'envergure et plus utiliser la ligne nord.

NOTE:

Low Visibility Procedures (RVR less than 1200 to 600 ft)

1. Application

These procedures apply to ground movements of aircraft during low visibility conditions (Runway Visual Range [RVR] less than 1200 to 600 ft). Arrivals and departures below RVR 600 are not authorized. When weather conditions indicate visibility below RVR 1200 is imminent, procedures will be implemented to ensure the safe and efficient movement of aircraft. The following message will be added to the ATIS broadcast: **"LOW VISIBILITY PROCEDURES IN EFFECT"**

2. Surface Guidance and Control System

Surface guidance and control system have been installed to facilitate the ground movements of aircraft under low visibility conditions. This system, controlled by ATC, is:

- Taxiway centreline lights on exit taxiways B1, B3 and holding bay 24R.
- Taxiway uni-directional centreline lights on taxiways A (between J and A4), A4 (between A and the apron), B, B1, B2 (from B to runway 10/28), B3, D, E (from the apron to I), F, H, I, J and K.
- Bi-directional centreline lights on the North ramp from taxiway G to A4, South ramp from G to gate 65, and East and West taxilanes up to gate 66.
- Stop Bars on all access to runway 06L/24R: on the holding bays of runways 06L and 24R, at the end of runway 28 before the intersection with runway 06L/24R and on taxiways B1, B2, B3, E and G (illuminated under 1200 RVR).

  NOTE: AT NO TIME SHALL A PILOT CROSS AN ILLUMINATED RED STOP BAR

- Runway guard lights on all access to runways: on the holding bays of runways 06L, 24R, 06R and 24L, at the end of runway 28 before the intersection with runway 06L/24R, on runways 06L and 24R before the intersection with runway 10/28 and on taxiways A, A1, A2, A3, A4, B1, B2, B3, D, E, F, G, J, L and R (illuminated whenever the associated runway is in use).

NOTE: The above mentioned taxiway centreline lights and stop bars may be used at or above 1200 RVR.

Source of Canadian Civil Aeronautical Data: © 2023 NAV CANADA All rights reserved

3. Airport Surface Detection Equipment (ASDE)

Ground radar is used to monitor the position of aircraft and vehicles operating on the manoeuvring area. In the event of an ASDE failure, ATC may restrict low visibility operations.

4. "Follow me" Vehicle

A "Follow Me" vehicle will be provided on pilot's request.

5. Departure Routes

Runway 06L is the only one certified for take-offs during low visibility conditions (RVR less than 1200 to 600 ft). All departures under low visibility conditions will be on runway 06L. Intersection take-offs are not authorized.

Sequencing of aircraft ground movements for take-off: Do not request start, push back or taxi clearance until reported RVR is greater than:

Aircraft/Pilot Take-off Minima	MInimum RVR for Start
1200 RVR	1000 RVR
600 RVR	600 RVR

Unless otherwise advised by ATC, the following standard routes will be used, under low visibility conditions, for aircraft departing on runway 06L (see low visibility taxi chart).

From the main apron to the de-icing bay: aircraft will taxi on E and H or on D and K.

From the main apron to runway 06L: aircraft will taxi on the main apron to the holding bay runway 06L.

From the de-icing bay to runway 06L: aircraft will taxi on I, B, B2, F and on the apron to the holding bay runway 06L.

From the de-icing bay to the main apron aircraft will taxi on taxiways J, A and A4.

From general aviation to 06L, aircraft will taxi on taxiway R, across threshold 24L, taxiways A and A4, north side of the apron to the holding 06L.

6. Arrival Routes

Aircraft will exit runway 06L on taxiways B1, B3 or holding bay 24R, taxiways B, B2, F and then follow Apron Control instructions. Aircraft destined to the general aviation sector will exit the main apron at A4, and will taxi via runway 06R, and taxiways L and R.

Procédures en conditions de faible visibilité
(RVR en dessous de 1200 jusqu'à 600 pieds)

1. Application

Ces procédures s'appliquent aux aéronefs circulant au sol en conditions de faible visibilité (portée visuelle de piste [RVR] en dessous de 1200 jusqu'à 600 pieds). Les départs et les arrivées en dessous de 600 RVR ne sont pas autorisés. Lorsque les conditions météorologiques indiquent que la portée visuelle de piste pourrait descendre en dessous de 1200 RVR, les procédures suivantes seront mises en place afin d'assurer la sécurité et l'efficacité des mouvements d'aéronefs. Le message suivant sera alors diffusé l'ATIS : **« PROCÉDURES EN CONDITIONS DE FAIBLE VISIBILITÉ EN VIGUEUR »**.

2. Système de guidage et de contrôle de la circulation de surface

Un système de guidage et de contrôle de la circulation de surface a été mis en place afin de faciliter le mouvement des aéronefs en conditions de faible visibilité. Ce système, commandé par l'ATC, comprend :

- Des feux axiaux de sortie sur les voies de circulation B1, B3 et baie d'attente 24R.
- Des feux axiaux unidirectionnels sur les voies de circulation A (entre J et A4), A4 (entre A et l'aire de trafic), B,B1,B2 (de B à la piste 10/28), B3, D, E (de l'aire de trafic à I), F, H, I, J et K.
- Des feux axiaux bi-directionnels sur la rampe nord de la voie de circulation G à A4, sur la rampe sud entre G et la barrière 65, et sur les lignes de guidage est et ouest jusqu'à la barrière 66.
- Des barres d'arrêt sur tous les accès à la piste 06L/24R : dans les baies d'attente des pistes 06L et 24R, à l'extrémité de la piste 28 avant l'intersection de la piste 06L/24R et sur les voies de circulation B1, B2, B3, E et G (allumées en dessous de 1200 RVR).

  Note : NE JAMAIS TRAVERSER UNE BARRE D'ARRÊT ALLUMÉE

- Des feux de protection de piste sur les accès de toutes les pistes : les baies d'attente des pistes 06L, 24R, 06R et 24L, à l'extrémité de la piste 28 avant l'intersection de la piste 06L/24R, sur les pistes 06L et 24R avant l'intersection de la piste 10/28 et sur les voies de circulation A, A1, A2, A3, A4, B1, B2, B3, D, E, F, G, J, L et R (allumés en tout temps sur les accès des pistes en service).

  Note : Les feux axiaux de voies de circulation et les barres d'arrêt sus-mentionnées pourraient être utilisés dans des conditions égales ou supérieure à 1200 RVR.

3. Radar de surveillance des mouvements de surface (ASDE)

Un radar de surveillance des mouvements de surface est utilisé pour la localisation des aéronefs et des véhicules sur les aires mouvements. En cas de panne de ce radar l'ATC peut restreindre les actions en conditions de faible visibilité.

4. Véhicule « Follow Me »

Un véhicule équipé d'une affiche « Follow Me » sera disponible à la demande des pilotes.

Source des données aéronautiques civiles pour le Canada : © 2023 NAV CANADA Tous droits réservés

5. Trajets pour les départs

Seule la piste 06L est homologuée pour des décollages en conditions de faible visibilité (RVR en dessous de 1200 et pouvant atteindre 600 pieds). Tous les départs en conditions de faible visibilité se feront sur la piste 06L. Les décollages à partir d'intersections ne sont pas autorisés.

Mise en séquence des mouvements au sol d'aéronefs pour décollages : ne pas demander de démarrer les moteurs, de refouler ou une autorisation de circuler à moins que le RVR rapporté ne soit supérieur aux valeurs suivantes :

Minima de décollage du pilote ou de l'aéronef	RVR minimum pour démarrer les moteurs
1200 RVR	1000 RVR
600 RVR	600 RVR

À moins d'avis contraire de l'ATC, les trajets suivants seront utilisés en conditions de faible visiblilité pours les aéronefs au décollage de la piste 06L (voir carte de circulation en conditions de faible visibilité).

Du tablier principal en direction de l'aire de dégivrage : les aéronefs circuleront sur les voies de circulation E et H ou D et K.

Du tablier principal en direction de la piste 06L : les aéronefs circuleront sur le tablier jusqu'à la baie d'attente de la piste 06L.

De l'aire de dégivrage en direction de la piste 06L : les aéronefs circuleront sur les voies de circulation I, B, B2, F et le tablier jusqu'à la baie d'attente de la piste 06L.

De l'aire de dégivrage en direction du tablier principal : les aéronefs circuleront sur les voies de circulation J, A et A4.

De l'aviation générale, la voie de circulation R, traverser le seuil 24L, les voies de circulation A et A4, voie de circulation du côté nord de l'aire de trafic jusqu'à la baie d'attente 06L.

6. Trajets pour les arrivées

Les aéronefs quitteront la piste 06L en utilisant les voies de circulation B1, B3 ou par la baie d'attente de la piste 24R, les voies de circulation B, B2, F puis suivront les instructions du contrôle du tablier. Les aéronefs se dirigeant à l'aviation générale quitteront l'aire de trafic à A4 et utiliseront la piste 06R, et les voies de circulation L et R.

NOTES SUR POINTS DE DÉPART

1 Du poste 85, refoulement face au nord au point de départ 1.

B Des postes 56, 58, 60, 64, 66 et 73, B737 et aéronefs de plus de 36m (118') d'envergure remorquer au point B face à l'ouest.

5 A l'arrivée pour les barrières 80, 82, 84, 86, S1, S2, S3, S4, diffuser vos intentions.

6 **7** Refoulement face à l'ouest.

10 Du poste 11B, aéronefs avec une envergure de 36m (118') ou plus, refoulement au point de départ 10 et circuler vers Alpha Mike pour toutes les pistes sauf 06R.

S Après refoulement remorquer au point de départ S pour démarrage moteur.

14 Des postes S1 à S4, aéronefs avec une envergure de 36m (118') ou plus, refoulement face à l'ouest au point de départ 14.

NOTE: Référez au CFS - section PRO pour description des procedures.

CARTE D'AÉRODROME — CYQB

EFF 29 DÉC 22

Reduced Visibility Procedures (RVR less than 2600 to 1200 ft)

Reduced Visibility Operations - 24 hours

Reduced Visibility Operations on runway 06-24: these are operations when reported visibility is less than RVR 2,600 feet or ½ statute mile and greater than or equal to RVR 1,200 feet or ¼ statute mile, per advisory circular CI 302-001.

Low visibility operations (LVOP) (below RVR 1200') are not permitted.

Departures & Arrivals

Follow-me car

A "Follow-me" car will be available at all times, under any circumstances, upon a pilot's request. This service is available for one aircraft at a time based on first come, first served principles; some exceptions may apply.

During RVOP conditions, run-ups and towing will not be authorized on the maneuvering areas. Furthermore, vehicle access to the maneuver area during reduced visibility operations is restricted to essential operational functions only.

Night Only: When reported visibility is less than RVR 1800 or 3/8 SM, a "Follow-me" car is mandatory per advisory circular AC 302-004.

Operation Terms

20 minutes prior to a flight's departure time, the pilot shall contact NAV CANADA's ground controller to request a "Follow-me" car escort for taxiing on the manoeuvring area.

The pilot shall provide the following information:

- Exact position on the airfield (gate or FBO);
- Type of aircraft and airline;
- Flight departure time (if available);
- Runway used for take-off;

The "Follow-me" car will position itself 30m in front of the aircraft. Hazard lights will be activated when ready for taxiing and for the duration of the escort procedure.

Upon receiving authorization to proceed, the "Follow-me" car will follow the guide lines at no more than 30kph (16 knots) up to the desired destination.

Runway Level of Service

Rwy 06	RVR 1200
Rwy 24	(¼ sm)

Procédure d'opérations avec une visibilité réduite
(RVR en-dessous de 2600 jusqu'à 1200 pieds)

Opérations visibilité réduite 24 heures

Les opérations effectuées sur la piste 06-24 : lorsque la visibilité signalée est inférieure à un RVR 2600 ou ½ mille terrestre, mais supérieure ou égale à une RVR 1200 ou ¼ mille terrestre, est en conformité avec le circulaire CI 302-001.

Les opérations par faible visibilité (LVOP) (en bas de RVR 1200') ne sont pas permises.

Départs & Arrivées

Véhicule « Follow-me »

Un véhicule « Follow-me » sera disponible en tout temps, pour toutes circonstances, à la demande des pilotes. Ce service s'applique pour un vol à la fois, sur une base de premier arrivé, premier servi, sauf exception.

Lors d'opérations RVOP, aucun remorquage ni essai moteur n'est permis sur les aires de manœuvre. De plus, l'accès par véhicule à l'aire de manœuvre lors de conditions de visibilité réduite sera restreint aux fonctions essentielles aux opérations seulement.

Nuit seulement : Lorsque la visibilité signalée est inférieure à une RVR 1800 ou 3/8 SM, un véhicule « Follow-me » est obligatoire en conformité avec le circulaire CI 302-004.

Conditions d'exploitation

20 minutes avant l'heure de départ ou à l'arrivée du vol, le pilote place une demande pour l'assistance d'un véhicule d'escorte « Follow-me » afin de circuler sur les aires de manœuvre en communiquant avec le contrôleur sol de NAV CANADA.

Le pilote doit fournir les informations suivantes:

- La position exacte sur le site (numéro de barrière ou FBO);
- Le type d'appareil et la compagnie aérienne;
- L'heure de départ du vol (si applicable);
- La destination sur le site (seuil de piste, numéro de barrière ou FBO);

Le véhicule « Follow-me » se présentera devant l'appareil à une distance de 30m et les feux de détresse (Hazard) seront activés afin de démontrer qu'il est prêt à circuler, et ce, pour toute la durée de l'escorte;

Après autorisation de circuler, le véhicule « Follow-me » suivra les lignes guides à une vitesse de 30 kph (16 nœuds) jusqu'à la destination demandée.

Parking spaces	Maximum wingspan (metres)	Maximum length (metres)	Restrictions	Largest aircraft allowed	Other aircraft allowed
WEST PARKING					
W1	40.4	34.4	• Power out is permitted for 737 only when parking spaces W2, 1, 1A and 1B are unoccupied • Power out is permitted for propeller when parking space W2 is unoccupied	B737-300	DHC-8-Q400 B1900
W2	40.4	34.4	• Reserved to C130 Hercules • Power out is permitted when parking space W1 is unoccupied	B737-800	C130 Hercules DHC-8-Q400
NORTH PARKING - General Aviation CTC OPR 418-962-8211					
Other parking spaces available in self-service Possible up to DHC-8-300 when parked at a 45° angle				DHC-8-300	

Notes:

- The movement guide line on the main apron is restricted to aircraft with wingspan of 36 m or less;
- The Hercules is not permitted on twy C and D; after landing on rwy 09, backtrack to twy A;
- If impossible to park according to marking, because operational constraints (wind etc.), use the NORTH parking (GENERAL AVIATION);
- North parking (GENERAL AVIATION) limited to the aircraft whose tail does not exceed:
  - 17 m when the tail is on the edge of the traffic area, or
  - 12 m when the tail is parked along the edge of the apron.

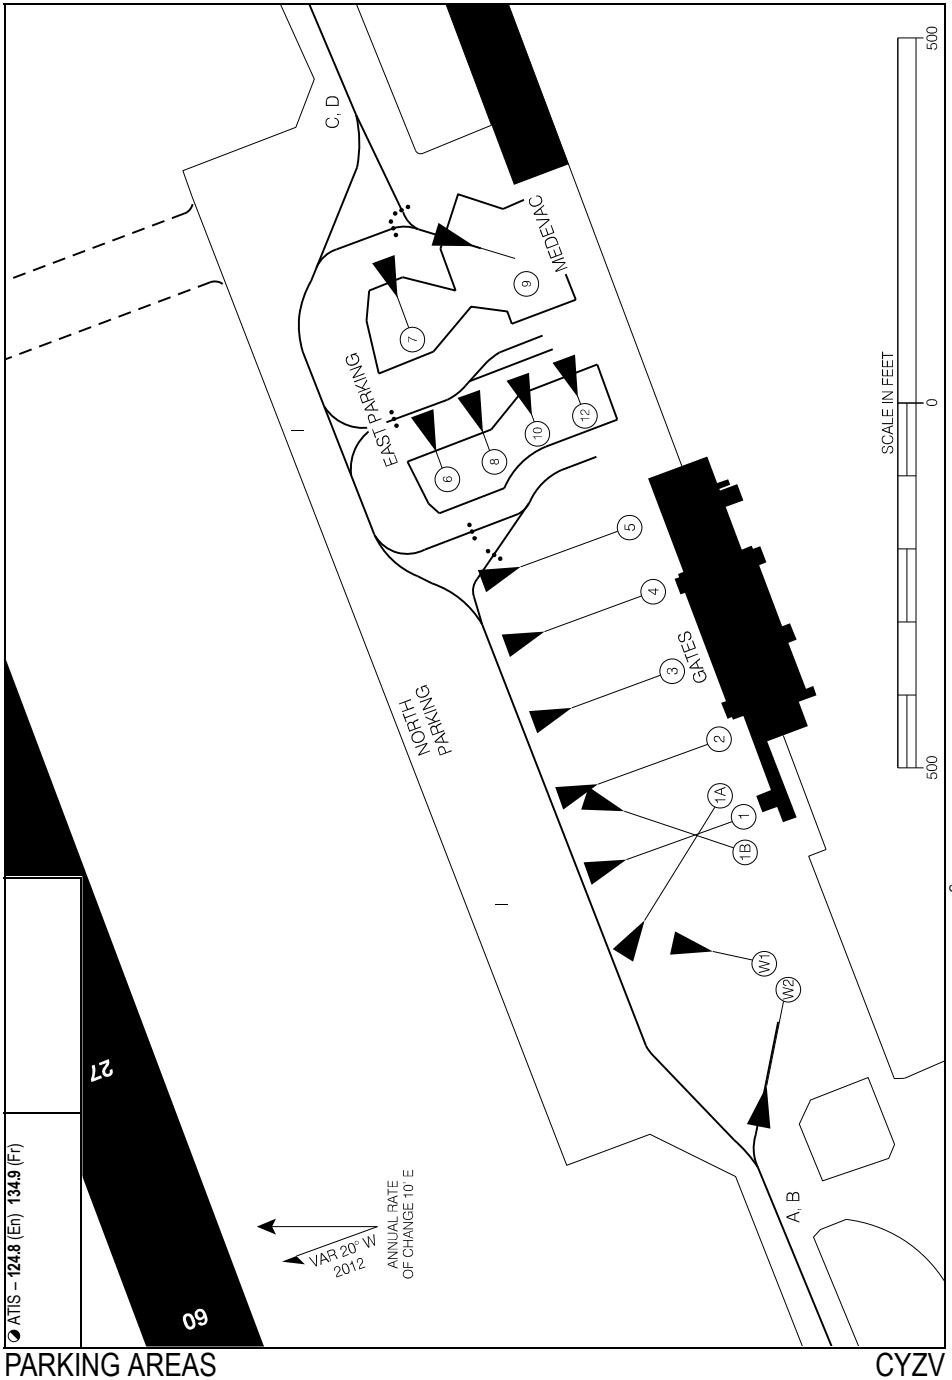

ATTENTION: Parking inside the perimeter only (white full lines) in order not to infringe the zoning of the runway, the taxiway or the parking spaces.

Low Visibility Procedures (RVR less than 1200 ft to 600 ft)

Application

These procedures apply to ground movements of aircraft arriving and departing under low visibility conditions. Arrivals and departures below RVR 600 are not authorized. When weather conditions indicate visibility below RVR 1200 is imminent, procedures will be implemented restricting aircraft and vehicle operations on the manoeuvring area. The following message will be added to the ATIS broadcast: “LOW VISIBILITY PROCEDURES IN EFFECT”.

General

The approved taxi route from the Apron is shown on the Low Visibility Taxi Chart. Taxiway centreline lights will be illuminated in taxiway A, G, F, across Rwy 14, taxiway L to the stop bar.

Departures

When low visibility procedures are in effect, Rwy 23 is the only runway certified for low visibility operations.

Take-off roll cannot commence prior to the displaced threshold location, where the runway is served by high intensity white runway edge lights.

Sequencing of Aircraft Ground Movements for Take-off

Pilots must follow instructions on Sequencing of Ground Movements for Take-Off as described in CAP GEN Operating Minima.

Do not call for taxi clearance until the reported RVR is a minimum of 600.

Runway Level of Service	
Rwy	**Certification**
23	RVR 600

Stop Bar/Guard Light System

Each taxiway/runway entrances onto Rwy 05/23 is equipped with a stop bar consisting of red inset lights. Also, installed on either side of the stop bars located at the taxiway entrances onto Rwy 05/23 there are yellow flashing runway guard lights (Wig Wags). When the red stop bar lights are illuminated, green lead on lights beyond the stop bar are extinguished. When ATC issues a clearance to proceed onto the runway, the red stop bar lights will be extinguished and the green lead on lights beyond the stop bar will be illuminated. The stop bar is reset automatically as the aircraft moves onto the runway.

AT NO TIME SHALL A PILOT CROSS AN ILLUMINATED RED STOP BAR

Arrivals

Arrivals are permitted on Rwy 23 for approved operators down to RVR 600. Twy J and Twy B are the approved exit routes. Landing aircraft traversing to Aprons I, II or III must exit Rwy 23 on Twy B or Twy J.

De-icing Operations

1. Contact de-icing provider 30 min prior to dep if de-icing is required. Notify de-icing provider of any special treatments prior to pushback: ICE MAN 122.950, phone number 902-410-7748
2. De-icing provider will assign de-ice pad and advise when ready.
3. DO NOT PUSH prior to assigned de-ice pad being ready.
4. To mitigate congestion on the APN, QUEUING for de-icing is NOT ACCEPTABLE.
5. Monitor Halifax GND 121.9 for all APN movement.
6. Follow instructions to designated de-ice pad.
7. Advise ICEMAN immediately once brakes set, aircraft configured and engines at idle.
8. After de-icing, configure aircraft for taxi, however, DO NOT MOVE AIRCRAFT.
9. Once instructed, contact Halifax GND 121.9 for taxi.

Apron Procedures

1. All aircraft departing Positions 301, 302, 303 and 304 must be towed to the Apron III tow bar disconnect position located on the taxi line between Positions 301 and 302.

2. Aircraft departing Positions 305, 306, 307 and 308 may taxi to the hold position at Apron III/Twy J. If required to stop for any reason while taxiing on Apron III, the aircraft must be towed to the tow bar disconnect position.

3. Monitor ground frequency 121.9.

REDUCED VISIBILITY PROCEDURES (RVR less than 2600 ft (1/2 sm) to 1200 ft (1/4 sm)) and LOW VISIBILITY PROCEDURES (RVR less than 1200 to 600 ft)

Application

These procedures apply to ground movements of aircraft departing under reduced and low visibility conditions.

Departures below RVR 600 are not authorized.

When weather conditions indicate visibility below RVR 2600, procedures will be implemented restricting aircraft and vehicle operations on the movement area. The following message will be added to the advisory: "REDUCED VISIBILITY PROCEDURES IN EFFECT" or "LOW VISIBILITY PROCEDURES IN EFFECT"

General

REDUCED VISIBILITY TAXI ROUTES

Taxi routes during reduced visibility operations are exclusive to the following routes:

1. Route 1 - Twy C, Rwy 14/32. For departure Rwy 05/23, continue Twy A to Rwy 05/23.
2. Route 2 - Twy I, Rwy 14/32. For departure Rwy 05/23, continue Twy A to Rwy 05/23.
3. Route 3 - Twy B, Rwy 14/32. For departure Rwy 05/23, continue Twy A to Rwy 05/23.

Aircraft restricted to one on the maneuvering area at any time during reduced visibility operations.

LOW VISIBILITY TAXI ROUTES

Taxi routes during low visibility operations are exclusive to the following routes:

1. Route 1 - Twy C, Rwy 14/32, Twy A - to Rwy 05/23.
2. Route 2 - Twy I, Rwy 14/32, Twy A - to Rwy 05/23.
3. Route 3 - Twy B, Rwy 14/32, Twy A - to Rwy 05/23.

Aircraft restricted to one on the maneuvering area at any time during low visibility operations.

When RVR falls below 600, movement of all aircraft ceases.

Rwy 14/32 will be used for taxiing purposes only during low visibility conditions.

DEPARTURES

Rwy 14/32 and Rwy 05/23 for departures in reduced visibility conditions.

Rwy 05/23 will be used for departures in low visibility conditions.

During RVOP/LVOP departure clearance or Pre-Taxi validation will not be given to any requesting aircraft if any other aircraft has been issued an approach or departure clearance until:

- either the arriving aircraft has landed and reported off the manoeuvring area or
- a departing aircraft is in contact with the Moncton Area Control Centre.

Take-Off roll cannot commence prior to the displaced threshold location where the runway is served by high intensity white runway edge lights.

REDUCED VISIBILITY PROCEDURES (RVR less than 2600 ft (1/2 sm) to 1200 ft (1/4 sm)) and LOW VISIBILITY PROCEDURES (RVR less than 1200 to 600 ft)

Sequencing of Ground Movements for Take-off

Pilots must follow instructions on Sequencing of Ground Movements for Take-Off as described in CAP GEN Operating Minima.

All aircraft are to obtain an IFR clearance or Pre-Taxi validation through the Saint John FSS prior to taxiing from any apron at Saint John Airport and are required to use the designated taxi routes.

Departing aircraft taxiing from a hangar along Twy B during RVOP or LVOP are required to taxi via Twy B to Rwy 14/32, Twy A to Rwy 05/23.

Do not request IFR clearance or Pre-Taxi validation until the RVR is greater than 600.

Guard Light System

Yellow flashing runway guard lights (Wig Wags) are installed at the Twy A entrance onto Rwy 05/23, Twy B onto Rwy 14/32, and Twy C and Twy I onto Rwy 14/32. When the twy edge lights are illuminated, the guard lights are turned on.

ARRIVALS

Arrivals are permitted on all runways for RVR 2600 ft (1/2 sm) to 1200 ft (1/4 sm). Twy A, Rwy 14/32, Twy B or Twy C and Twy A, Rwy 14/32, Twy I are the approved exit routes in RVOP.

Arrivals are not authorized in LVOP conditions.

RUNWAY LEVEL OF SERVICE

RWY	Certification	RWY	Certification
05	RVR 600	14	¼ sm
23	RVR 600	32	¼ sm

Note: Departing aircraft taxiing from a private hangar will be advised that RVOP or LVOP conditions are in effect. FSS will maintain one-in and one-out movements and will request aircraft access the designated taxi route.

Low Visibility Procedures (RVR less than 1200 ft to 600 ft)

Application

These procedures apply to ground movements of aircraft departing under low visibility conditions. Arrivals and departures below RVR 600 are not authorized. When weather conditions indicate visibility below RVR 1200 is imminent, procedures will be implemented restricting aircraft and vehicle operations on the manoeuvring area.

General

Low Visibility Taxi Routes

Standard taxi routes are shown on the Low Visibility Taxi Chart, taxiway surfaces are painted with enhanced yellow and black centreline markings, in addition, taxiways B, C, G, H, J and Runway 16/34 are equipped with green centreline lights.

Airport Surface Detection Equipment (ASDE)

Ground radar is used to monitor the position of aircraft operating on the manoeuvring area, in the event of an ASDE failure, ATC will restrict low visibility operations to one aircraft on the manoeuvring area at a time.

Departures

When low visibility procedures are in effect, Runway 11/29 is the only runway certified for low visibility operations. Intersection takeoffs are not authorized.

Sequencing of Aircraft Ground Movements for Take-off

Do not request start, push-back or call for taxi clearance until the reported RVR is greater than:

Aircraft/Pilot Take-off minima	Minimum RVR for start
1200 RVR	1000 RVR
600 RVR	600 RVR

Stop Bar/Guard Light System

Each taxiway/runway entrance onto runway 11/29 and runway 16 is equipped with a stop bar consisting of red in-set lights and red elevated lights located at the taxi holding position. Yellow flashing runway guard lights (Wig Wags) are installed at each side of the stop bar location. When the red stop bar lights are illuminated, green lead on lights beyond the stop bar are extinguished. When ATC issues a clearance to proceed onto the runway, the red stop bar lights will be extinguished and the green lead on lights beyond the stop bar will be illuminated. The stop bar is reset automatically as the aircraft moves onto the runway. In the event of stop bar/guard light failure, ATC will restrict operations in low visibility operations to one aircraft on the maneuvering area at a time.

"AT NO TIME SHALL A PILOT CROSS AN ILLUMINATED RED STOP BAR"

"Follow me" service is available via Pilot request to ATC.

De-icing Procedures

1. Contact ICEMAN thirty minutes prior to push back on 129.2 MHz.
2. Contact ST JOHN'S GND after pushback for taxi to CDF.
3. Hold short of CDF on H.
4. ST JOHN'S GND will advise the flight crew to contact ICEMAN on 129.2 MHz when the aircraft has taxied to the proper entry point.
5. ICEMAN will then delegate all further manoeuvring instructions from the entry point to and on the CDF.
6. Flight crews are advised to exercise discretion at all times while on the CDF. Directional signage and taxi lines on the CDF must be followed by flight crews at all times.
7. Upon completion flight crews must advise ICEMAN that all equipment and de-icing personnel are away from the aircraft and have returned to their designated safety zones.
8. ICEMAN will instruct the aircraft to hold its position on the CDF and contact ST JOHN'S GND on 121.9 MHz.
9. Aircraft to hold its position until ST JOHN'S GND issues further taxi instructions from the CDF.

Notes:

- Aircraft intending on returning to any apron after de-icing must drip dry for 25 minutes on CDF.
- Single engine taxi not permitted from CDF.
- Engine run-ups are not permitted on CDF.
- Contact 709-753-9742 for de-icing if Icehouse unavailable.

De-icing Bay Restrictions

1. BAY 1 – Maximum wingspan for de-icing operations 35.8m (117ft).
2. BAY 2 – Maximum wingspan for de-icing operations 35.8m (117ft).
   Note: BAY 3 is closed/unusable when BAY 2 is occupied.
3. BAY 3 – Maximum wingspan for de-icing operations 79.75m (262ft).
   Note: BAYS 2 and 4 are closed/unusable when BAY 3 is occupied.
4. BAY 4 – Maximum wingspan for de-icing operations 35.8m (117ft).
   Note: BAY 3 is closed/unusable when BAY 4 is occupied.

Note: The above noted maximum wingspans are intended to protect adjacent de-icing bays, safety zones and the apron taxiway. Exceedances of these values are permitted but must be evaluated and approved by the airport authority to ensure special operating procedures are communicated and implemented.
